Laying and managing the cable.
1861—A submarine telegraphic cable with had been manufactured with great care was laid across the Mediterranean from Malta to Alexandria with intermediate landing places at Tripoli and Benghazi. The cable consisted of seven copper wires stranded together, covered with several coatings of gutta percha, alternated with other nonconducting and waterproof material, and in turn covered and protected by eighteen ducting and waterproof material, and in turn covered and protected by eighteen iron wires wound spirally about this core. This cable proved a permanent success, and went into general operation shortly after its construction. The great operation shortly after its construction. shortly after its construction. The speed of transmission, which on the Atlantic cable and shorter submarine lines had been three words per minute, was "We understand that the negotiations been three words per minute, was brought up to ten words per minute, on

1864—Construction of a cable line to Nanaimo, March 23.—(Special)— Ald. Wm, Manson, jr., accountant at the Nanaimo sawmill, had his leg broken this afternoon while driving aonlg Mill street. His buggy struck a piece of wood which in some peculiar manner penetrated a hole in the bottom of the buggy, striking Manson, with the above result.

The steamer Amur sailed this evening for Skagway.

The steamer Amur sailed this evening and waterproof.

Tensian Guit to connect with land lines, thence to Calais, and by the short submarine line under the British channel to England. The submerged line in the Arabian Sea and the Persian Guif had a total length of 1.450 miles, but with three intermediate landing places. This line consisted of a copper core surrounded by layers of gutta percha alternated with other non-conducting and waterproof. The steamer Amur sailed this evening of Skagway.

J. H. Davison, brother of ex-Mayor avison of this city, returned last even-way from Dawson.

In the above required this evening of gutta percha alternated with indicance attaches to the appointment of Commodore Clifford to command the British sheathing of twelve galvanized iron wires would spirally about it, which in turn far advanced in the British navy list was were protected by double wrappings of ever before appointed to its com proved a complete success, becoming the first successful telegraphic connection
