John W. Neufeld President

Arconas Corporation is a manufacturer of seating for Corporate and Institutional use. All of the company's products are moulded in high resiliency, cold cure, CFC free urethane directly onto steel frames to provide an extremely durable, comfortable and fire retardant product.

Approximately 60% of the firm's Designs are by Canadian designers with the remainder European. The Product Designs are of a contemporary to transitional style. Because of manufacturing techniques and the ability to manufacture their own moulds, they are very versatile in providing custom requirements.

For corporate clients the firm manufactures mostly executive chairs, lounge and reception sofas and chairs. For the hospitality market, the company manufactures lounge chairs and sofas including special requirements for the cruise ship industry.

Arconas Corporation also has a Healthcare division which manufactures patient chairs, day room chairs, recliners and sleeper chairs for health care institutions seeking to provide a homelike, yet fully medically correct environment. All health care products are designed under the careful eye of a physiotherapist consultant.

The company currently markets throughout Canada and the U.S. and has some of the Canadian Designed products being made under license in Europe.

The firm would be most interested in furthering European markets, but most especially in the Asian/Pacific rim. The company is currently developing the Mexican market and intends to use this as the basis to expand into Central and South America.
