

L E S S E R B U S T A R D .

near the top and bottom with a white circle : breast and belly white : middle feathers of the tail crossed with rust and black, the rest white.

FEMALE entirely ferruginous and black, except wings and belly.

SIZE of a Pheasant.

PLACE.

Appears in *Sweden* rarely in the spring : not traced further north. Very frequent in the southern and south-west plains of *Russia*, and in small flocks when it migrates. Continues a good way into the deserts of *Tartary* ; but is never seen in *Siberia*.
