

THE
PRINCE EDWARD ISLAND

ADVERTISEMENT.

In issuing the second number of the New Series of the Prince Edward Island Calendar, the publisher feels himself justified in expressing a hope that, in many of its features it will be found still better adapted for the purposes for which it is intended, and consequently more deserving of patronage, than its immediate predecessor.

The table of *Remarkable Days* has been carefully revised and also extended by the additional record of the dates of several recent events.

A *Gardener's Calendar*—especially written for this Island—has been substituted for the *Farmer's*. As horticulture has, within the last two or three years, been practised to some extent in the Colony, and is likely to be gradually still further advanced, as its importance shall become known, this substitution will, the publisher hopes, be found generally acceptable.

So many complaints have been made on account of the omission of the *predictions concerning the weather* in the last year's Calendar, that the publisher has thought it best to return to the old usage in this respect; and has therefore inserted the *predicted changes* for the year 1853, taken from the same source as that from which they were derived for previous years. These *predictions*, it is well known, are no more than *vague guesses*, based on the general observations and experience of former years, and severally extending over periods of such duration as to admit of a probability of fulfilment; the publisher, therefore, cannot think that they will be received for any more than they are really worth.

The *Sun's declination*, being chiefly used by seamen, has been taken from the *Nautical Almanack*, as it is calculated for the meridian of Greenwich.
