

The three stages of the employment picture represent most vividly the regional development differences between the provinces. The provinces are displayed in descending order of the number of jobs created by manufacturing. Newfoundland is the lowest, with the lowest average 1970 rate of job creation. None of these stages is independent of the other two. The rate of job creation is a function of the rate of investment, and the rate of investment is a function of the rate of saving.

Stage 1 illustrates the most basic relationship, the proportion of the population that is employed in manufacturing. This is the basic relationship. Canada's population has increased from 20 million in 1950 to 25 million in 1970. The rate of job creation in manufacturing has increased from 1.5 per cent to 2.5 per cent. Newfoundland has a rate of 1.5 per cent, which is significantly below the national average.

The data shown in Stage II in which the labor force is broken into employed and unemployed. Newfoundland's rate of job creation is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average.

Unemployment is significantly above the national average. Newfoundland's rate of job creation is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average.

We have considered Newfoundland and because it is the most extreme example. But the same picture is seen in other provinces. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average. The rate of job creation in manufacturing is 1.5 per cent, which is significantly below the national average.

Although the rate of job creation is reported for the provinces, the rate of job creation in Newfoundland is the lowest.
