1000	0	500	0	250	0	76	92¼	19	23	2	73¾

The above table affords the means of ascertaining what a given sum per annum amounts to for a less period of time. It should be borne in mind, that the results in the last three columns are not *strictly* accurate; the fractional quantities which necessarily occur in the minute subdivisions being represented by halves and quarters only. The results are given as nearly as is possible by the aid of these fractions.
