		29 <i>snow or sleet.</i>	3 3	6 33	6 3	7 33

He notes well the practices of others, and carefully compares them with his own—resolving to improve his system by adopting whatever is applicable to his circumstances. While prosecuting inquiries, however, he should avoid a credulous assent to untried schemes and theories. Though he should examine freely, he should apply cautiously—he should endeavour to “*prove all things, and hold fast that which is good*”—counsel, which though originally given in reference to spiritual concerns, should be held as a motto in all temporal affairs. Have good feeding racks, and save a quarter of the hay otherwise trodden underfoot; one ton lost in every four, is five in every twenty, which would soon pay for many good racks. Mix cut or chopped hay with straw, and with meal and roots, and save much hay with fine cattle to boot—chop corn stalks fine, that cattle may eat all—get a good straw cutter and keep it going—Fodder cattle regularly, give them water at all times and plenty of salt.
