# POULTRY YARD

### The Poultry Man

mannama

Wilbur Bennet, Peterboro' Co., Ont. The most important part of the whole poultry business is the man himself.

Beaman who makes a success of poulty to-day must have a genuine love for his fowl. He must not have a lay alter his many a lay streak in him. These two features properly applied, with the addition of some brains, will give him eggs in winter from his flock. He will not need a hospital or medicine chest sher than a hatchet, which should be the remedy in all cases of debility, weak lungs, or sick birds, and thus the vigor of the utility flock is kept up to the lay beat protch. A fancier will generate the state of the stat The man who makes a success

CHAS. A. CYPHERS' Model Incubators and Brooders

On my Model Poultry Farm I now have soultry numbering 80,000 hatched and prooded in my famous Model Incubators

brooded in my famous Model and Brooders. Buy-ing your incubators and brooders of a man who knows nothing (or next to nothing) about hatching and raising poultry is running a useless risk. Don't do it.

I not only sell you a Model Incubator or Brooder, but 1 add to them the valuable experience of years as shown in their construction. Model Incubators show excellent hatches, hatch every hatchable egg. The Model Brooder grow sturdy chicks.

Send your order in to-day, and get in the with the profit getters. Free catalogue for everyone.

THE MODEL INCUBATOR CO. 196-200 River Street TORONTO, ONT.

make his flock pay for its keep in marketable eggs and dressed chickens.

#### Care of Poultry

Care of Poultry

"if poultry were properly cared for, they would give better returns than the poultry were properly cared for the poultry was about \$1.46 a year to keep one hen. Plymouth Rocks and White Wyandottes are the best general purpose fowls. It is not advisable for a farmer to invest in an incubator, unless one of the family is prepared to give it proper care and attention. A better plan is to set four or five hefis at terp plan is to set four or five hefis at terp plan is to set four or five hefis at terp plan is to set four or five hefis at the plan is to set four or five hefis at the plan is to set four or five hefis at the plan is to set four or five hefis at the plan is to set four or five hefis at the plan is the p

bad there is a chance to put new eggs under the spare hens. It is better to set hens at night in a separate trood house, first taking care to give them a thorough dusting with insect powder, or when the chicks hatch the parasites will bore into their heads causing death, un-less the intested parts be smeared

with grease.

Hens should not be set after Jur Hens should not be set after June, as young chicks do not thrive well in hot weather. No food should be given to the birds until they are over a day old. The yolks which their bodies have absorbed, are sufficient to sustain them. The first food should consist of bread, soaked in milk, squeezed Gr, and crumbled hard-boiled costs. Later on a mash could be given of bran, corn meal, middlings and milk.

## Age Limit of Eggs for Setting

I have a cockerel and two pullets that I raised from an imported setting of hist I raised from an imported setting of hist Orpinston eggs. I have made the trio and want to breed only from them, so as to have as many of this kind next age of one egg a day, it will take some time to save a setting. How long will ave age remain fresh enough to hatch out eggs are waiting to be set.—L. R. C., time-berland Co., N. 8.
As eggs are now being superspections.

berland Co., N. S.

As eggs are now being successfully sent long distances for hatching purposes, it follows that they will keep under favorable conditions, for keep under favorable conditions, for some time. An egg a day would only mean two weeks saving to get a set-ting. The first eggs will certainly keep that long and hatch well after-wards, though they will be a few hours later than those perfectly fresh. While saving them, lay them on bran and turn every day. Keep in a cool,

# A House for the Winter Layer

Wilbur Bennet, Peterboro' Co., Ont.

Wilbur Bennet, Peterboro Co., Ont.
Having a properly constructed and
ventilated poultry house is essential
to winter egg production. I do not
favor warm and expensive houses, as
they are not required. Do not build
double walled or artificially heated
buildings. Such are unnecessary even
in the coldest weather. What is required is a house tight enough to
prefectly dry. An earthen floor is the
best possible, and also the cheapest,
and the windows should be gener us,
made either of glass or cotton curtains,
placed high enough on the south side

TRINITIES STOCK AT GUILLPH, 1807, Bard and cather of glass or cotton curtains, or prington and White Wynagotte, egg for sale at \$1.50 a setting. H. T. Lush, black dight enough on the south side placed thigh enough on the south side in the first prize of the fi

and other coops. The litter on the floors should be changed often enough to have it always dry and clean.
Fowl may be kept in almost any size flock, some people having as high as 2000 together, and using the hopper feeding system with success. Of course in the large flocks, they are kept solely for egg production, but for foreding purposes it would are present the floor of the country of the company of the company of the company of the country of the c

# Need Grit and Vegetables

We hens are not laying and moop around a good deal. They no not seem hungry and leave their foot after eating rather listlessly. I feed good grain, changing from The pen is a comfortable one, and fowls eem healthy, but pale in the comb, and they give no return for the feed given them. What is the troublet—Mrs. T. B., Sask.

T. B., Sask.

The trouble appears to be lack cf grit, and probably the birds require some vegetable food as well. You can get first-class gri: from your feed store, as most of these stores now carry a stock of it. It is very cheap, only about one cent a pound. The vegetables you can give in the form of cabbage heads hung in the pen, or mangels, spit.

With these additions, and plenty of clean water, you should have a healthy flock, and get eggs.

## The Breeding Pens

How soon should the breeding pens be mated up in order that I may have chicks in April that will be from the male and many hens would you advise to mate with one msle, of the American cluss? Are any males needed with the general laying flock\*—J. W. Garleton County.

any males needed with the general laying flock+-J. W. Carleston County.

It is time the breeding pen was mated up now, if results are wanted from that pen, for April breeding. You can make 8 to 16 lemales to one male of the American class. It is much better to have no males with the males which the pen to the pen for males was a much time. This gives an unfertilized egg, that will keep indefinitely, and even after being incubated for some time, would still be as sweet for user as when fresh. Most of the large egg ferms now keep their layers away from the male bird, and thus get a better class of eggs to supply their trade.

### Mites in Incubators

After running my incubator in the cellar for a couple of hatches. I found it was covered on the inside with a small mites as the machine is a new one, and has never been near where poultry is kept. What are they, and what will keep then down!—J. B., Feel Co., Ont.

kept. What are they, and what will keep teen down!—3. B. Feel too, Omt.

Your cellar is probably a little damp, and the insects are caused by that, and while harmless, they are disagreeable to work around. A tar disinfectant would probably expel them. A preparation that is spoken highly of, and recommended for such purposes, is "Zenoleum." This is a tar product, and has the additional advantage of being "Made in Cannida," the plant being at Windsor, Ont. It is carried by druggists all over the country, and you can likely secure it easily. It is also said to increase the vitality of the chick if used in the incubator.
