

THE ACADIAN.

WOLFVILLE, N. S., AUG. 15-1919.

Editorial Brevities.

If our paper is meeting with your approval as a newspaper tell your neighbor who is not receiving it. If it is not meeting your approval, tell us.

The Prince of Wales arrived at St. Johns, Newfoundland, on Tuesday. He is expected to reach Halifax on Monday and a big welcome is being planned for him.

The embargo on the export of hides and leather to the United States, passed at the urgent insistence of Dr. R. J. McFall, Chief of Living Commission, is not likely to be withdrawn, despite much trade pressure. It is stated to be only the first of several similar suggestions made for the reduction of the present cost of commodities by conserving Canadian products for home use. The situation is a little complex by the fact that in normal times there is both export and import of hides and leather, but Dr. McFall thinks that in view of the statement that boots may be retailed at \$20 some drastic step is necessary to prevent manipulation of our markets by foreign dealers who have no interest in the Canadian workingman. The embargo is one of a series designed to reduce prices and to prevent further soaring.

The Finscher, England's oldest financial daily paper, has recently presented to its readers a forty-eight page supplementary edition devoted to the progress and prospects of the Dominions, Colonies and Dependencies of the British Empire. The issue is specially designed to signalize a great epoch in imperial history.

Under the Captain, 'Our Victory Number' the Finscher editorially says:

'Just five years ago the British Motherland took up arms in defence of the rights of free peoples and in fulfilment of solemn treaty obligations. Instantly her daughter Colonies beyond the seas rallied to her aid and made her cause their own. In the heroic struggle that followed they have ever stood by her side, cheerfully contributing their share of sacrifice and winning glory every theatre and sphere of warfare imperishable glory. It is only fitting that they should prominently participate in her triumph and that the measure of their help should be realized and emphasized.'

Death of Andrew Carnegie.

Andrew Carnegie, the steel magnate and philanthropist, died at his Lenox summer home, Shadow Brook, Mass., at 7:10 Monday morning, after an illness of less than three days with bronchial pneumonia.

Andrew Carnegie was born at Dunfermline, Fifeshire, Scotland, on November 25th, 1835. He came to America with his family in 1848 and settled in Pittsburgh. In 1887 he married Louise Whitfield of New York. His first work was as a weaver at Allegheny, Pa. In 1851 he became a messenger boy in the Pittsburgh office of a telegraph company. He learned telegraphy, became an operator and advanced by steady promotion until he became Superintendent of the Pittsburgh Division of the Pennsylvania system. He later joined Mr. Woodruff, inventor of the sleeping car, in organizing the Woodruff Sleeping Car Company, and gained there by the nucleus of his fortune. Careful investment brought him further wealth. During the Civil War, he served as superintendent of military railways and government telegraph lines in the East. After the war, he developed iron works at various points in the United States and introduced the Bessemer process of steel making. The increase of his fortune was steady until he became numbered with the richest men in the world. In recent years, his philanthropy has reached colossal proportions and the name of Carnegie will long endure because of its stimulus and support of charity and education. The Carnegie Fund contributed generously to Acadia University. He gave libraries to many cities and towns in the U. S., Great Britain and Canada and millions to other beneficiaries.

Some alterations are being made to two of the college buildings. An addition is being made to the College Women's Residence whereby the dining room will seat fifty more. This addition will also give rooming accommodation for thirteen or fourteen more girls. Some repairs were necessary on Rhodes Hall and it was found that it would cost little more to put on an additional storey and this now being carried out. The rooms in this part of the building will be used for dormitory purposes this year. The work on the buildings is being done by the Rhodes, Curry Co., of Amherst.

The Provincial Tennis Tournament is being held at Wolfville this week. Four players from the Wolfville Tennis Club are in attendance, Messrs. W. Tufts, Austin Chase, W. H. Chase, Jr., and Dr. C. F. A. de Witt. On Tuesday R. W. Tufts and Dr. de Witt each won their sets in the singles, while the other two players lost. In the doubles Tufts and Chase won their set and the others did not play. On Wednesday R. W. Tufts again won in the singles, and Dr. de Witt and W. H. Chase won in the doubles.

Subscribers to MacLean's Magazine, Canada's National Magazine, only \$2.00 per year. H. P. Davidson, The Magazine Man.

Vaccination.

To the Editor of THE ACADIAN: One writer speaks of Vaccination as 'The Pontic of all the Devil and Dirty Doctors for the creation and spread of Disease, for the Debauching and Destruction of Humanity.'

The following is a description of how Vaccine Virus is made: 'A cell is strapped to an operating table. The belly and udder are shaved and about one hundred incisions are made with a lancet, and into these wounds is rubbed the filthy pus taken from a running sore on a smallpox patient.'

'The cell is then unstrapped and tied up with its head to the wall so that it shall not lick itself for eight days. Some of you know what you have suffered from a single pustule on your arm—the terrible irritation.'

'At the end of eight days this poor dumb creature, after passing through fever and smallpox, is brought back and once more strapped to the table in order to get the dirty, decomposed matter out. The pustules have to be squeezed with iron clamps. Often the tops are cut off and the matter from the scabs scooped out.'

'This is the dirty, rotten animal tissue called vaccine that the Board of Health wish to inject into the bodies of the children of Wolfville.'

Dr. J. M. Peebles, a distinguished physician and author, who has made five journeys around the world and has treated smallpox in every civilized country in the world, says: 'The leaders of the Vaccination movement must be perfectly aware of the fact that vaccination stands condemned.'

George W. Winterburn, M. D., Ph. D., says: 'Syphilitic tuberculous or cancerous poisons may be vaccinated into a child's body and these remain latent for years and then erupt the soil in which they have been planted. Our eyes may not follow it in its various paths and development in later life: through the children and children's children whom that bloodstain has developed and accomplished its work of final ruin.' 'It is a serious thing to poison life at its fountain-head, even falsely thinking to avert a possible future danger; but to thus poison the blood—the life force—deliberately for gain, is a most infamous crime against society.'

Since the introduction of vaccination, tuberculosis and cancer have greatly increased. Good authorities express the belief that the above mentioned diseases are due, largely, to the practice of vaccination. In the North American Review (April, 1882) Dr. Martin shows that the Boston epidemic of 1872-73 was more terrible and more distinctly contagious than the one in 1821, which was the year before vaccination was introduced, and statistics prove that nearly all who died in 1872-73 had been vaccinated. In the smallpox outbreak in Montreal during 1885-86 1200 persons positively known to have been vaccinated died of the dread malady.

When vaccination was tried by the French government on 25,000 soldiers stationed in Paris, the reports prove that mortality was doubled and the cases of levers had increased to six times the number on record prior to the introduction of inoculation.

Dr. Copeland says: 'Vaccination favors the several forms of scrofula.'

Dr. F. B. Cornell says: 'It is my firm conviction that vaccination is a curse instead of a blessing.'

Alexander von Humboldt said: 'I have clearly perceived the progressive and dangerous influence of vaccination in England, France and Germany.'

Dr. Gregory, who for half a century was the head of the smallpox hospital in London, said: 'The idea of extinguishing smallpox by vaccination is as absurd, as chimerical, as irrational as it is arrogant.'

Will the people of Wolfville submit to the demand of the Board of Health? Let the Board of Health vaccinate their own little children, if they wish, but hands off their neighbor's children. This town is not under the rule of an autocrat.

FRIEND OF THE CHILDREN.

The Price of Milk.

To the Editor of THE ACADIAN: In the last issue of THE ACADIAN I notice 'Householders' protest against the price of milk, and the end is not yet. We might also include all other staple articles of food which have more than doubled in price. I wonder if his advice in reducing the consumption of milk by one half would solve the question of high prices that we are now paying for other staple articles of food.

There is no shortage in pasture, in fact the frequent rains have caused more food per acre than in ordinary years. All dairymen, however, will tell you that the first of August there is a shrinkage in the milk flow because the food value of the pasture has gone, or that material is lacking that will give a constant flow of milk. This is why it is necessary to feed a balance ration of grain, or suffer the loss of 20 per cent in the milk flow.

It is true that the crop of hay is very large, but not true that the price is lower than last year. A large price in hay is now paying \$25 per ton, and has orders for more than the crop can supply. A livestockman of the town has just filled his barn with hay for which he paid \$30 per ton.

We are all opposed to profiteering. Do you think those who have made their money in that way are capable of advising the general public?

There is a little food value in milk. With your permission, Mr. Editor, in your next issue we will have an article on 'The Food Value of Milk, for Householder's special benefit.'

FAIR PLAY.

Minard's Lintment Cures Colds

MEATS:

FRESH—Lamb, Beef, Mutton, Veal, Fowls and Chickens.

CORNER—Beef, Pork

Dutch Inventor Visiting Halifax.

HAS APPARATUS WHICH BURNS KEROSENE TO PRODUCE HEAT

Mr. G. Van Daam, of Amsterdam, Holland, a well known inventor and patentee of no small fame, is visiting the city in connection with the introduction in the Maritime Provinces of one of the latest and most successful of his inventions, an apparatus for making possible the substitution of kerosene in the place of wood and coal as a heat producer. With Mr. Van Daam is Mr. G. Gerson, the manager of the National Builders Co., Ltd.

The apparatus which has been on sale in the United States and Ontario for some time, is being exhibited at the office of John White and Co., Lower Water Street. It can be made to fit any stove of furnace, and Mr. Van Daam claims that it produces a very hot flame and that its upkeep costs less than manufactured gas.

Mr. Van Daam has had a rather remarkable career as a combustion engineer. At the age of twenty-two he was employed in that capacity by the United States Government in connection with the building of the Panama Canal. He leaves shortly for Newfoundland, where he expects to introduce his burner to the fishermen.

It is said that the invention has been used with success on fishing schooners on the Banks.—Morning Chronicle.

Mr. Geo. Shearer, of Grand Pre, is the agent for Kings county for the above mentioned invention, which is now being demonstrated at Mr. E. J. Delaney's shop. Call and see it.

30 Years Ago.

The following items are taken from the files of THE ACADIAN of thirty years ago:

The chief social event in Wolfville his week has been the marriage of Mr. Walter V. Higgins and Miss Edith Chipman, which occurred on Wednesday.

The Methodist Sunday school of Kentville, Greenwood and Wolfville, united, held a picnic at Long Island on Wednesday last. The Baptist Sunday School of this place will hold their picnic to day at Oak Island.

The yield of cucumbers in this section of the county, so far, has exceeded the expectation of the most sanguine, and producers are satisfied with the price being paid, viz., 1 1/2 cents per pound. Up to the present time the picking establishments at Gasperau have received about 1200 bushels, and according to present appearance, this will be doubled, making the entire yield equal to 2,400 to 3,000 bushels.

Viscount Grey, former Secretary of State for Foreign Affairs, has agreed to represent British government at Washington sending the appointment of a permanent ambassador.

The city of Sydney is planning for a big reception to its returned soldiers on August 29th.

TO LET or LEASE

House, seven rooms and bath, furnished or unfurnished. House New and Modern, also Garage and Hen House. Owner going away.

H. G. Collins, Box 283, Wolfville, N. S.
