THE VICTORIA GULCH

MINES. Limited

CAPITAL \$1,000,000

"THE KLONDYKE'S MOTHER LODE"

The storehouse from which the famous placer creeks, Bonanza and Eldorado, received their fabulous wealth, have been uncovered on the claims of The Victoria Gulch Mines, situated on the ridge at the head of Victoria and Gay gulches. The company's holdings consists of four quartz claims of about 200 acres 14 miles from Dawson, on a good wagon road and two miles from the Klondyke Mines R.R. There are two true quartz veins, between perfect walls 6 and 16 feet wide on the property, the free milling ore from which is lite ally encrusted with the yellow metal. Read what some of the world's greatest authorities say!

R. C. McConnell, B.A., of the Geological Survey, says in his report on the Klondyke Goldfields:

of the survey and gave 2,625 oz. of gold and 3,267 oz. of silver to the ton."

Pro. Henry A. Meirs, D. Sc. F.R.S., Waynflete, Professor of Mineralogy in the University of Oxford, in collaboration with Professor A. P. Coleman in a report to the Musister of the Interior says: "At the head of Victoria Guich which runs into Bonanza, a creek opposite Gay Gulch, a tributary of Eldorado, and at a height of about 2,300 feet above Dawson, has been opened, what appears to be a true quartz vein, showing nuggety gold in abundance. The gold is distinctly crystalline in character, and the crystals are of a peculiar form having a triangular outline due to the fact that they are octahedra, and in particular a remarkable variety known as "spinel twins." Now it is significant that the gold found in Victoria gulch is also crystalline and has the same characteristic outline, here then we have fairly convincing evidence that the gold found in a stream glavel is identical with that found in situ in a quartz at the head of the valey and in this instance there can be little doubt as to the origin of the gold."

Dr. Eugene Haanel, Director of Mines, a noted authority on mineralogy in a report to the department in 1902 says: "Masses of quartiwere seen protruding from the surface all about the locality, and it needed only to wet the surface of the quartz with water to reveal the bright specks of gold adhering to their surface.

"Gay gulch and Victoria gulch, the former a tributary of Eldorado."

"Gay gulch and Victoria gulch, the former a tributary of Eldorado creek, the latter of Ronanza creeks, limit Victoria Hill toward the sources of Bonanza and Eldorado creeks. Above Victoria and Gay gulches, Bonanza and Eldorado creeks respectively are unproductive, below these gulches the creeks are rich. It seems a rasonable conclusion that the gold in these creeks, at least as far as they flank the side of Victoria Hill, was derived from Victoria Hill.

Mr. R. W. Brook, Director, Conference Structure of Eldorado.

of Victoria Hill, was derived from Victoria Hill.

Mr. R. W. Brock, Director Geological Survey, says: "The district is not glaciated. Gold in the recent gravel freshly derived from its original source is similar to gold in the corresponding White Channel gravel. Many of the gold grains and most of the nuggets, enclose quartz. Quartz pebbles are found containing gold, some at least very rich in gold. The quartz of the boulders is similar to the quartz of the veins, and gold of the veins to gold of the gravels. From the foregoing and other facts, it is obvious that the gold is absolutely local in origin, derived from the basins of the pay gulches and creeks.

Fred T. Congdon, Member for the Yukon, stated on the floor of the

Igin, derived from the basins of the pay gulches and creeks.

Fred T. Congdon, Member for the Yukon, stated on the floor of the House of Commons last January that some of the richest gold quartz in the world was being mined close to Dawson.

Just stop and think of the immense possibilities of rich returns from the development of the claims of The Victoria Gulch mines, when two miles of the Mother Lode runs through the property from which he \$55,000.000 in placer gold has been already won from Eldorado and Bonanza creeks, the one-third the Klonydke's entire output, 100,000 shares of treasury stock of the par value of \$1 is now offered for public subscription at 25 cents per share fully paid and non-assessable.

"A sample in which no free gold could be detected with the naked, or an ordinary magnifying glass, was assayed in the laboratory the survey and gave 2,625 oz. of gold and 3,267 oz. of silver to the
