### DIAMOND SPECTACLES.

These Speciales are manufactured from "MINUTE CIRYNTAL PREMILES" melted together, and are called DIAMOND on account of their hardness and brilliancy.

It is well known that speciales cut from Brazilian or Scotch pebbles are very injurious to the eye, because of their polarizing light.

Having been tested with the polariscope, the diamond lenses have been found to admit fitteen percent less bested rays than any other pebble.

They are ground with great scientific accuracy, are free from chromatic abertations, and produce a brightness and distinctness of vision not before attained in spectacles.
