

*Stiria rugifrons* Grote.

This species is found to have been unintentionally omitted from the "Check List."

*Tarache patruelis* Grote. (743 of "Check List.")

A small species taken by myself in Alabama, and sent from Bastrop Co., Texas, by Mr. Meske. Referred here provisionally. Scaly. Fore wings triangulate, shaded ochreous and pale. The ordinary lines very pale and narrow. The most prominent ornamentation an oblique stripe (median shade?) running inwardly from costal angulation of t. p. line to middle of hind margin, and joining an apical streak so that it appears to issue from apex. The stripe is whitish, bordered inwardly with deep ochreous. Outside of it the narrow t. p. line runs divergingly to internal margin. Hind wings pale yellowish white, stained along external margin. The Texan specimen is smaller, more yellowish and paler than my type from Demopolis, which expands 16 mil.

The second part of my Check List of Noctuidæ is delayed by my not having as yet sufficient material in the Deltoids, and I venture to call the attention of my correspondents generally to this fact and to urge the collection of this group the present season. I shall be glad to receive collections of Deltoids from any quarter and will determine and return specimens promptly.

*Hypenula*, n. g.

The moth possesses characters which ally it to *Renia* and *Hypena*. The ♂ antennæ are setose and provided with two longer bristles on each joint. The ♀ antennæ are similar, but the bristles are shorter. The palpi are free, very long, curved, with elongate second joint, and extend upwardly above the head; they are flattened, rather shortly scaled and seem to be slightly longer in the male. Eyes naked, tibiæ unarmed, vestiture of allied genera. The wings are more elongate than in *Hypena*, much like *Renia*, with full-rounded secondaries not exceeded by the abdomen.

*Hypenula opacalis*, n. s.

♂ ♀. Entirely dusky blackish fuscous. Median lines fine, black, denticulate, single. T. a. line outwardly curved. Reniform with two superposed white dots (sometimes obsolete), small, yellowish or dis-
