

WISNER SEEDING MACHINES

The "WISNER" Machines are known from one end of Canada to the other, as the most reliable and efficient. They are the result of the life-long experience of Mr. Wisner, who has devoted all his energies to improving and perfecting this particular class of Machinery. In amalgamating the "WISNER" business with our own, we aimed to join our experience as manufacturers to that of Mr. Wisner, under whose personal supervision all the "WISNER" Implements are still built, so as to offer to our customers the result of our combined efforts, and to give them the newest, most efficient, and best line of Implements of this class that can be produced.

These Machines are adapted for every part of Canada, the peculiarities of each section of country receiving our greatest care. Our friends can rely on these goods as being perfectly suited to their wants, and capable of doing their work as well as it can be done.

Index Plate, showing how Change of Quantity is made.
