## SPRING CALF FEEDING

How to Feed and Handle the  
Young Arrival.

The Dam's Milk the Best First Food  
—Skim Milk Should Gradually  
Replace Whole Milk—Grass or  
Stable for Calves?

(Contributed by Ontario Department of  
Agriculture, Toronto.)

THE calf that comes in the  
spring, comes just at a time  
when everybody is so busy  
getting the spring work  
done that he is very liable to be re-  
glected to a certain extent. Young  
calves are very susceptible to disease  
com—on to young cattle and a little  
lack of attention to spring calves is  
liable to cause serious trouble to  
them.

There are two menaces to calves  
in spring and summer, and those are  
extreme heat and flies, and one is on  
a par with the other. Arrangements  
should be made whereby the calves  
are kept during the day and al-  
lowed to run out in a paddock at  
night. By this means they are  
afforded a liberal amount of exercise  
and good pure fresh air, and also  
they are allowed to get some of the  
nice juicy green grass, which is the  
nearest thing to a complete and bal-  
anced ration that can be found out-  
side of milk.

When the calf is dropped it may  
be well to leave it with the dam for  
a few hours in order that it may get  
the first milk (or colostrum) which  
is so necessary on account of its ac-  
tions on the digestive tract. When  
the calf has received sufficient colo-  
strum to set up the necessary action  
it should be removed from its mother  
into a separate stall, or it may be put  
into a stall with other calves of the  
same age or nearly so. If, by any  
chance, the cow's udder is inflamed,  
the calf may be left for a few days,  
because of the beneficial effect that  
the calf nursing has upon it.

For a few days the calf should be  
fed whole milk, but when it is two  
to four weeks old a change should be  
made, skim milk gradually replacing  
the whole milk from eight to ten  
days taken for the change. When  
the whole milk is totally replaced the  
milk may be increased to eighteen  
or twenty pounds per day for a calf  
six weeks old. The best kind of  
skim milk for calves is warm, just  
when it leaves the farm separator.

However, everybody may not have a  
separator, and then this is not pos-  
sible. In any event the system start-  
ed with the calf should be followed  
as nearly as possible at all times,  
because radical changes in diet are  
sure to cause severe digestive trou-  
bles. Pails and all feeding utensils  
should be kept very clean to elimi-  
nate any danger of disease from  
bacteria being lurking within.

Skim milk feeding may be contin-  
ued on as long as it is thought ad-  
visable, up to eight or ten months  
old. Good thrifty calves may be  
weaned as early as three months old,  
providing good substitutes for the  
milk are used.

The most frequent trouble in rais-  
ing calves is indigestion or scouring.  
This trouble is usually caused  
by overfeeding, feeding milk too  
cold, feeding milk heavily laden with  
the disease germs, or by keeping the  
calves in a dirty, poorly venti-  
lated quarter. The calves should be  
watched carefully, and if they show  
signs of scouring immediate steps  
should be taken to effect a cure. The  
ration should be reduced and a little  
lime water put into the milk. If  
immediate action is needed, about  
one-half cupful of strong black tea  
or some castor oil given at once.

As for meal for the calves, rolled  
oats are good, and if they are getting  
no whole milk a little linseed oil  
cake should be added. The oil cake  
has a laxative property as well as  
supplying a little fat to the ration.  
A good meal for calves: 100 lbs. of  
ground oats, 50 lbs. bran and oil  
cake (cutted) 25 lbs. Good clover  
hay is essential at all times, giving  
enough to allow the calves to pick  
out the nice succulent parts, and still  
not be wasteful. J. C. McBeath,  
O. A. College, Guelph.

Should Calves Go Out to Grass or  
Remain in the Stable?

Generally speaking, calves are bet-  
ter kept in the stable during the  
winter months, except where stable  
conditions are not good, and where  
there is not enough labor to look af-  
ter them and keep them dry and  
in the. The only other exception is  
in the case of calves dropped in the  
early winter and which have had  
three to six months of milk and more  
or less dry feed. Such calves may  
be all right, if turned out to grass  
as soon as the pasture is good and  
the weather warm and pleasant. Par-  
ticularly is this the case where milk  
and other feed is scarce on the farm.

The chief advantages of keeping  
calves in the stable, the first summer  
are:

1. They can be fed milk and other  
feed as required, which is often neg-  
lected when calves run with the cows,  
or are pasturing some distance from  
the barn.

2. Calves in a clean, well-ventilat-  
ed stable are protected from the hot  
sun, storms and flies, which often  
prevent that good growth which is  
essential for a well-nourished thrifty  
calf.

3. If allowed to run with the herd,  
the older animals are likely to "boss"  
the calves and may injure  
them, or deprive them of their proper  
share of feed.

4. Cases of sickness, such as indi-  
gestion or "scours" are more likely  
to be noticed, and properly treated,  
if the calves are inside where they  
are seen frequently.

5. As a result of this better care  
and feed, better cows are more likely  
to be reared, which means larger  
returns to the owners of cows.—Prof.  
H. H. Dean, O. A. College, Guelph.

John Allan was fined \$2 in police  
court this morning for allowing his  
dog to run at large.

## BENZINE EXPLOSION

IN TORONTO WIPES OUT  
FAMILY OF FOUR

TORONTO, March 8.—The explo-  
sion of a can of benzine, followed by  
a fire, caused the death of four per-  
sons at Nos. 8 and 10 Moscow ave.  
yesterday afternoon at 12.50. The  
dead are:

HERBERT FOSTER, aged 36.

ALICE FOSTER, aged 30.

Their two children, Aileen, aged 7

and Olive, aged 5.

The entire family was wiped out  
by the explosion and fire, and the  
whole progress of the tragedy occu-  
pied the space of only half an hour.  
Herbert Foster survived until seven  
o'clock, dying in the General Hos-  
pital from his injuries.

Yesterday afternoon the charred  
kitchen and badly damaged lower  
door of the brick veneer and rough-  
cast building were the only evidences  
of the grim occurrence of an hour  
or so before. A doll's baby carriage,  
belonging to one of the children  
burned to death, the gutted interior  
of the kitchen, an overturned and  
burned table lying in the centre of  
the kitchen were mute witnesses of  
the disaster which overtook the Fos-  
ter family as they were preparing  
to eat the midday meal. Lying in  
the kitchen, where death had held  
sway, was the scorched and black-  
ened roast of beef upon which the  
family were preparing to dine.

Exploded Can Found.

So far as can be learned, Foster,  
who ran a little tailoring and repair  
shop at No. 10 Moscow avenue, was  
trying to fit a spout in a can of ben-  
zine. The spout had evidently become  
loose, and had fallen out. When the  
room was investigated after the fire  
the spout, held in a pair of pliers,  
was still resting in the cook stove,  
evidently heating so that solder could  
be applied. The exploded five gallon  
can was also found, bent and twisted  
with the force of the explosion.

The only details of the tragedy

come from Mrs. Phyllis Spicer, who,

with her husband and two little

children, occupied rooms upstairs.

The kitchen where the tragedy took

place is a one story frame structure

attached to the rear of the main

two story building. The entrance to

it is narrow, and runs out at the

left hand side of the room, while

another passageway turns at right

angles to lead to the passageway

into the two small shops. From

this passageway the stairs turn up

to the left, and a side door opens out

of the corridor into a lane, nearly

opposite the stairway.
