Actuaries' Mortality Tables.

The following extracts are taken princi- pally from the *Budget* and other first class Insurance Journals, and must therefore be reliable:

A Mr. Milne, from an extensive collection of vital statistics in and around Carlisle, England, constructed in the year 1781, what is known as the "Carlisle Table." This table was thereafter made the mortality basis, used by the life companies in their business, showing the "expectation of life," as follows:

At age 20 to be yet 41.5 years.

25	"	"	37.9	"
30	"	"	34.3	"
35	"	"	31.0	"
40	"	"	27.6	"
45	"	"	24.5	"
50	"	"	21.1	"
55	"	"	17.6	"
60	"	"	13.3	"

—a total of 9 lives to live 249.8 years, or an average of 27½ years each.

In the year 1837 the experience of 17 British companies were compiled into a table, known as the "Actuaries" table of mortality, showing the "expectation of life" as follows:

At age 20 to be yet 41.5 years.

25	"	"	39.0	"
30	"	"	34.4	"
35	"	"	30.9	"
40	"	"	27.3	"
45	"	"	23.7	"
50	"	"	20.2	"
55	"	"	16.9	"
60	"	"	13.8	"

—total of 9 lives to live 246.7 years, or an average of 27½ years each.

In 1869 the experience of 20 British Companies was compiled in a similar manner to that of 1837, and known as the "New Actuaries" Table," showing the expectation of life as follows:

At age 20 to be yet 41.98 years.

25	"	"	34.44	"
30	"	"	34.75	"
35	"	"	31.15	"
40	"	"	27.15	"
45	"	"	23.98	"
50	"	"	20.51	"
55	"	"	17.44	"
60	"	"	13.99	"

—a total of 9 lives to live 249.39 years, or an average of 27½ years each.

Mr. Sheppard Homans, the then actuary of "The Mutual Life Assurance Company" of New York (now the largest company in the world), compiled a table from the "ex- perience of that company, showing the "ex- pectation of life" as follows:

At age 20 to be yet 42.2 years

25	"	"	38.8	"
30	"	"	35.3	"
35	"	"	31.8	"
40	"	"	28.2	"
45	"	"	24.5	"
50	"	"	20.9	"
55	"	"	17.4	"
60	"	"	14.1	"

—a total of 9 lives to live 253.2 years, or an average of 28 years each.

When it is taken into consideration that the first three of these tables were con- structed, the first two fifty years apart, and the third thirty-two years later; that the subjects must have been entirely different, their situations and circumstances altogether varied, the similarity of these tables in their practical results should fairly prove to any unbiased mind their correctness and re-

liability. The latter table s, again, actual experience, totally independent of either of the former, being on American lives, and yet the result proves the correctness of the others, the total variation being only one half year on the average expecta- tion.

These mortality tables show that the per- centage of risk at the following ages is:

At age 20	\$7.29	per \$1,000.
" 25	7.77	" "
" 30	8.52	" "
" 35	9.29	" "
" 40	10.36	" "
" 45	12.21	" "
" 50	15.94	" "
" 55	21.66	" "
" 60	30.34	" "

This shows that at age 20, \$7.29 will cover risk on \$1,000 on each member ex- pecting to die in that year, while at age 60 the risk is \$30.34, or over four times as much.

The following are the rates charged by the Independent Order of Foresters at the respective ages given in the above tables:

At age	Monthly rate	Cost per year per \$1,000.
20	\$ 62	7.44
25	67	8.04
30	72	8.64
35	78	9.36
40	88	10.56
45	1.02	12.24
50	1.45	17.40
54	1.85	22.20

At 30 years of age the Old Standard rate, among the Stock companies is \$22.70 a year, as against \$8.64 in the I. O. F. made up about as follows:

Cost of Risk	\$8.42
Management Expenses	6.50
Reserve Fund	7.78

\$22.70
