Statistical.

The Census of Manitoba.—The census lately taken in the Province of Manitoba shows that the population is scarcely so large as we have been in the habit of supposing it to be. The total population is 11,965. Of these 4,070 are English half-breeds, 5,690 French half-breeds, 581 Indian house holders; the remainder, 1,614, being white inhabitants, half of whom are natives of the North West Territory, and the remainder Englishmen, Scotchmen, Canadians and foreigners. Of Protestants there are 5,906; of Roman Catholics, 6,059. 11,903 are British subjects, only 62 being American subjects; 3,928 are married; 6,761 are single; 265 are widows, and 102 are widowers. There are 6,212 males, and 5,703 females in the Province. Of these there are:—

aic •	Males.	Females.
Under 10 years	. 1,934	1,992
From 10 to 20		1,392
" 20 to 30	. 1,040	'910
" 30 to 40	. ´589	577
" 40 to 50	. 469	453
" 50 to 60	. 245	217
" 60 to 70	. 220	144
Over 70 years	. 181	68
	6.212	5.753

Out of the 199 persons over seventy years of age, no less than sixty-two are whites from a population of 1614, while only 110 are from among the half-breeds, who number 9,770 persons. This seems to indicate that the admixture of white and Indian blood does not promote longevity. Among the sixty-two whites over seventy years of age, there are thirty two Scotchmen, and six Scotchwomen, together with seventeen natives of Canada and three Englishmen. Out of the 1611 white inhabitants of the Province, 771, or very nearly one half, were born in Manitoba; only four of these have attained the age of seventy. There are 312 Canadians, 128 Englishmen and women. 247 Scotch, 49 Irish, and sixteen natives of France, 67 born in the United States, and 24 in other foreign countries. Among the 581 Indian householders (Christians) are 27 persons over seventy years of age.

Discoveries.

—Very interesting discoveries at Rome and Florence are reported in the Architect. In preparing the space before the palace for the fêtes in honour of Princess Margherita, the workmen came upon the remains of Roman mosaic pavements; to the north was a portico, and at right angles were three halls, one of them with a mosaic 10 ft. 1 inch. by 8 ft. 7 inch. This last is a conventional representation of Orpheus charming the beasts. The portico is much dilapidated; a large group in the centre, where horses' hoofs and the tail of a monster are traceable. Suggests the "hipolytus." Fazello mentions an ancient building on this site called the Sala Verde, a kind of amphitheatre which was levelled in 1549. The frescoes had been covered with whitewash, and cut to pieces to make room for cumbrous monuments. Starnina's paintings form two series from the lives of St. Anthony and St. Nicnolas respectively, and were executed before he was compelled to leave Florence in consequence of his share in the rising of Ciompi, in 1378.

—M. Castellani has found in one of the houses at Pompeii two medals, mostly silver, of the Consular and Imperial periods; and a large collection of gold jewellery, including a magnificent chain, nearly three yards in length, formed of golden tresses. There have also been found two splendid bracelets, called *ophis*, composed of great serpents, to be worn on the upper part of the arm, two gold ear-drops or pendants, set with pearls, two other bracelets formed of a double row of large globes cut in two and chained together, and six rings of various size and value. The chain is the third of the kind which M. Castellani has seen: the first was found at Cervetti, the ancient Agilla, in the celebrated tomb of Regulini-Gatassi, the other at Boulak, in an Egyptian tomb. The clasp of the chain just found at Pompeii is, however, of very peculiar design, but is not uncommon in jewellery of the Roman Empire. M. Castellani also speaks of an item discovered by him in the same excavation—namely, a well-defined impression of the body of a native of Pompeii in the act of flying from the doomed city. A plaster cast has been taken of it, and is now, with two other casts, in the Bourbon Museum at Naples.

Meteorology.

From the Records of the Montreal Observatory, Lat. 45°31 North; Long. 4h. 54m. 11 sec. West of Greenwich; height above the level of the

sea 182 feet; For the month of December, 1870. By CHARLES SMALLWOOD, M.D., LL.D., D.C.L.
