

CHAS. CLUTHE

SURGICAL MACHINIST

AND MANUFACTURER OF TRUSSES.

No. 134 King Street West, = = = Toronto, Ontario.

MY INSTRUMENTS for straightening Bow Legs and Club Feet, **MY APPLIANCES** for the cure of Posterior and Lateral Curvature of the Spine, and for the cure of other deformities of the human frame, can not be excelled.

MY TRUSSES are recommended by all eminent physicians.

But of all inventions in Trusses for Rupture there is soon something coming from my establishment, which will astonish the whole world—an Instrument or Truss which will retain the Hernia without springs and straps, in weight under $\frac{1}{2}$ of an ounce and the size of a pigeon's egg only; no inconvenience whatever. You may go into water, or log wood in the forest, row your boat, enjoy your ride in saddle. It is a wonder to myself. The world has not yet seen it, except a few, and I must be "mum" as to what motive I hold this wonderful little pad to its place as thoroughly as ever anything was held, because, before foreign patents are issued you

must not publish the details of your invention, and I cannot afford to lose them; but I am prepared to show you all about the wonderful new truss by calling at my office. If you can't call yourself send stamp for illustrated book on "Rupture and Human Frame."
