

Miramichi and the North Shore, etc.

A STRAY STEER is advertised by Mr. Leighton Derby.

A YOUNG MAN was drowned while skating on the Kennebecasis the other day.

MR. WILLIAMS of photographic fame advertises the establishment of his headquarters at Chatham.

THE RIVER is closing up slowly. Horses are crossing at Chatham, but the ice is none too safe yet.

THE BRITISH bark Granite City, from Dalhousie, for Queenstown, had been lost, and the crew landed at Cardiff.

THE F. E. ISLAND BANK will not cause any loss to the holders of its notes, but some time will elapse before the notes can be redeemed.

BLACK BROOK BRIDGE is to be rebuilt and tenders for the work, according to plan and specification, are seen at the office of A. Davidson, Esq., M. P. P. are invited until Saturday of next week, 17th inst.

AN OLD RESIDENT of Napan, Mr. Robert Brimmer, is among those who have recently died and been followed by the grave by a large number of friends. Mr. Brimmer was 71 years of age and up until a short time of his death took an active part in the duties of life.

BEWARE OF THE HOE.—We were shown, yesterday, portions of a carcass of pork raised in Chatham which was diseased very badly with cysticercus colliculosa. The globular parasites seen in the meat are to the size of a pin, and the cysts are of the butterfly and such shape, when eaten, is dangerous to human beings as well as to the lower animals which partake of it.

NEW TANKS.—Mr. J. A. Desmond, the contractor for the new Fire Department tanks, is making good progress with the work entrusted to him. The one in the lower part of the town is about finished and that on Church Street is being put in place. Each of these important reservoirs is 30 feet long 10 feet wide and 9 feet deep, thoroughly framed together, plated and caulked.

ABDUCTION.—S. D. Barton and Thomas M. Reed, Esqrs., of St. John, have been in town for more than a week. Together with John Ellis, Esq., they compose a Board of Arbitration appointed at the last session of the Circuit Court by His Honor Judge King, to settle a disputed account, involving a large amount of money between J. B. Russell, Esq., plaintiff, and Hon. W. Mainland, Esq., defendant. Their labors here were about closed last evening.

OLD MALT AND BREWERY.—This is the cheapest old malt in the market. It is comically "branded," and complete in every respect. It will settle the old Bachelor question as readily as the old maid, and with as much facility as the more elaborately finished pack, which retail at four times the price, put up in neat pasteboard cases. Sent by any adrest postage paid on receipt of price, 20 cents. H. G. Marr, Moncton, N. B.

HUNTING.—Messrs. Chas. A. D. Miller and Maurice Lafone had a very successful caribou hunt last week, on the Battlegrounds, with Mr. John Conroy as guide. They secured four splendid specimens, and as they are about to leave for England will, no doubt, have the satisfaction of presenting some of their friends at home with samples of their skill with the rifle. Mr. Carroll of St. John is, we understand, to mount the heads.

DIPHTHERIA.—When the regular winter weather—clear and fairly cold—set in last week, it seemed as if the epidemic of diphtheria in Chatham and its vicinity and a feeling of relief from what almost seemed like a threatened plague had taken the place of the general fear which had begun to manifest itself before that time. We have heard of several cases for a week and hope that the record may be equally clear for a long time to come.

HOLIDAY BOOKS.—A splendid line of books for Holiday Presents are just opening at the Miramichi Book Store, Chatham. A full line of Books, including St. James, Byron, Burns, Moore, Poe, Thackeray, Hemans, Goldsmith, Keats, Shelley, Keble, Tennyson, and among the works of fiction are Scott's and Marryat's novels, Gulliver's Travels, Robinson Crusoe, Scottish Chiefs, Grimm's German Tales, Chatterton of the Abbey, Wanderings in Ceylon, Assop's Fables, etc.

OBITUARY.—Mr. Thomas Ulcock, one of our best known and most respected young citizens, died on Thursday last after a protracted illness, and was buried on Sunday at St. Paul's Churchyard. The funeral was largely attended by citizens of all classes and sympathy with the mourning family is very general. At the morning service in St. Mary's Church, the Rector referred to the sad event and paid a deserved tribute to the estimable character of the deceased, who, in all the relationships of life, had acquitted himself worthily.

SHIP-BOARDING.—Shippers of fish by way of St. John, cannot do better than by sending their consignments to be forwarded by the International Steamship Company's boats, which leave St. John every Monday and Thursday morning during the winter season at eight o'clock. Indeed, this has become the favorite route, because of the promptness and regularity with which the business is done at both ends of the company's line, and the avoidance of mixed responsibility which arises when sending by any other route between New Brunswick and Boston.

THE AMERICAN NEWSPAPER ANNUAL, published by N. W. Ayer & Son, Advertising Agents, Philadelphia, is to be had. It is carefully prepared, so far as such works can be, and may be taken as giving full and correct details respecting all newspapers published in the United States and Canada, so far as they may be of interest to advertisers. Indeed, the general reader would, no doubt, find a great deal to interest him in its pages. No doubt, Messrs. Ayer have made a good deal of money out of the work, as newspaper proprietors have supported it liberally in the way of taking up its advertising space—an evidence that they, like all other intelligent business men realize that advertising pays all round.

THE SUN of Monday last represented Chatham as suffering much worse than the facts warranted from diphtheria and said that "the Health Officer" had recommended the closing of the public schools. Now, with the Sun in form as to "Health Officer" referred to and who he sent the "recommendation" to? Perhaps the Sun will also let us know whether the

"Health Officer" referred to has mastered our courage enough to recommend the statement of the slaughter nuisance in the middle of the town and the numerous "slop basins" over drains in so many back yards. If the Sun can find a "Health Officer" doing his duty in Chatham it is more than our own people can do. But, then, the Sun is noted for discovering things which do not exist.

LOST AND FOUND.—A. E. Killam, Esq., lost a package of Maritime Bank notes containing \$1,000 one day last week while on his way to St. Martin's. The Bank advertised the loss and a reward of \$100 was offered to the finder if he would return the money. A brakeman on the St. Martins and Upland Railway had, however, picked up the package in the car in which Mr. Killam went to St. Martin's and left it in the hands of the Station Master at Hampton, without even knowing who the loser was, or that it had been advertised. He also declined to receive the reward offered.

THE DEATH OF MR. D. M. PATERSON, for some time foreman in the Advance Printing Office, took place on Monday morning last. He went from work, as usual, on Tuesday evening of last week, and on Wednesday morning next word to the office that he was unwell. During that afternoon he grew worse, when medical advice was procured, and it was discovered that he was suffering from diphtheria, a case of the milder type. From the first, Dr. Benson, as well as other medical gentlemen, had little hope of his recovery and he died as above stated, leaving a widow and three children—the youngest being but five weeks old. Deceased was for seven years a member of Battery No. 7, Garrison Artillery, six of whose members, in uniform, acted as pall bearers at the funeral, which took place on Tuesday at three o'clock, and was largely attended. The interment was in the Methodist Cemetery, Chatham.

BATHURST NOTES. SCRIP ALBA AND CLIFTON BREAKWATER.—The Scrip Alba still lies stranded at Clifton Breakwater. She was owned by the Messrs. Whidden of Antigonish, N. S. Her cargo, which was completed, consisted of 240 tons of granite, for Lombard & Co., of Boston. Both vessel and cargo were damaged. Surveys were held on the vessel and cargo resulting in both being ordered to be sold. The cargo was bought by the agent of the Underwriters, who have taken the vessel off the owners' hands. They are now attempting to place her on an even keel with a view of getting the cargo out and floating her in the spring. The fact of two schooners being lost in Clifton within a fortnight has directed considerable discussion towards the Breakwater, and to its usefulness. The main part of the structure runs direct North from the main land with an ell at the outer end running westward—almost due East and West—leaving vessels exposed to the North-west gales, during the winter, which the "Alba" went ashore. The Captain also attributed the loss of his vessel to the extreme cold prevailing at the time. It is estimated that there was sixty or seventy tons of ice clinging to the bows of the "Alba" when she sank—coming off the spray from the sea breaking over her, freezing as it fell.

THE MARRIAGE.—The ladies of the Methodist congregation held a tea meeting in the Masonic Hall on Tuesday Evening, 29th ult. A small table at the head of the room contained a number of articles suitable for Christmas presents, which met with a ready sale. Tea was served from 6 to 8 p. m., and was well patronized. There was a large crowd in attendance, among the younger portion of which order was sadly wanting and there seemed to be nobody present whose duty it was to enforce it. The appointment of one or two stewards to keep order and to see that the enjoyment of such entertainments as well as their success. The proceeds netted \$120, which is to be applied to paying off the church debt.

ST. GEORGE'S.—The Ladies of St. George's Episcopal, purpose holding their semi annual Bazaar on Thursday, the 28th inst. They intend making this the largest of any yet held by them, and will offer for sale the finest lot of fancy goods suited to the season ever offered before in Bathurst. There will also be a tea in connection with the sale.

SOCCABLES.—The Ladies of the Presbyterian Church have arranged for a set of Soccales during the winter. The first comes off at the residence of Anthony Rainey, Esq., on Thursday Evening next, when all will be welcome.

RACE COURSE.—The horse fanciers of our town have had a race course laid off on the ice in the harbor for the purpose of deciding the vexed question as to who is the owner of the "Maud S." of Bathurst. As there are many aspirants to the honor, it is expected a programme of races will be announced for an early day. The ice is in very fair condition. Bathurst, 6th Dec., '81.

REGATTA NOTES AND NEWS. JAQUET RIVER, Dec. 1st 1881. Editor of Advance, Chatham.

SUN.—In the absence of any correspondence from the ambitious towns of Dalhousie and Campbellton, and in order that Regattonic news may reach the public through your valuable paper, I venture to send you a few items which may be of interest.

Our chief industries are, of course, frozen up. The mills have been kept full at work throughout the season, and large quantities of lumber have been shipped. When the new steam mill at Campbellton is in proper working order, as it will be next season, it will add very materially to the production of sawn lumber.

It has been rumored several times during the past year that another steam mill is likely to be built ere long at or near Dalhousie, and, in fact, this locality has also been mentioned, but, as yet, nothing has come of it. Certainly there is ample room in the County for the profitable investment of Capital in this branch of industry.

Our Spool Factory has been rebuilt and will, no doubt, do a large business in the near future. Mr. Becket, the resident partner of the firm, and sole manager here, is an energetic and sagacious business man. The Company have shown commendable enterprise in the rapidity with which they resumed work after the destructive fire of July last. There is a large quantity of the lumber they used in the County, and it is not unlikely that other parties may also establish factories in the salmon fishery of the past summer was, to some extent, a failure, but still, large quantities were caught, and old fishermen predict a good run next season.

Your readers are, no doubt, tired of the hull-bait raised by the investigation at Metapedia, which seems to have been very ingeniously directed from the real ground, the present system of artificial breeding, to an enquiry into the correct-

ness of Mr. Mowat's accounts. There seems to be a very general opinion that a breeding establishment is not required for the Regattonic fish spawning grounds are protected properly, and that, practically, it is, as conducted, of not the slightest benefit to other rivers.

The rumor of an early dissolution of Parliament, which obtained currency some short time ago, seems to have exerted a magic influence on several ambitious individuals, who began to feel their way to the front. The future has led out to a great extent, still it is said that Jno. McAllister, Esq., Attorney of Campbellton, is likely to test the County in opposition to the present member, Mr. McAllister, a gentleman of amiable character, and will likely poll a strong vote in the parish in which he resides—as Campbellton appears desirous of eclipsing the shiretown, but his chances for success outside of that parish are very questionable, in fact they may be put down as very slight indeed. His very recent conversion to Protectionist views is hardly likely to commend him to the people of a County which was so overwhelmingly in favor of Free Trade 3 years ago. Mr. McAllister's course has been straightforward and consistent. He has always worked with untiring energy for the benefit of his constituents; his character is irreproachable, and it is undeniable that in this section of the County he stands as well as ever with the electors. It is highly probable that Dalhousie Parish, already suffering the disadvantages arising from the shiretown being cut off from Railway connection, will give him a less hearty support in '83 than it did in '78.

Local Election matters are not attracting much attention. Mr. Barbic, who is, at least, consistent in his opposition to the present aspirant for a Government, will, likely, be a candidate. No doubt there will be the usual "scrimmages" next summer. The names of two popular Dalhousie gentlemen holding office in various positions have been mentioned in connection with political movements, but as there is no authority for using their names, I will not now further refer to them.

Mr. Kenny, our excellent Representative (7) will, it is said, not again allow us to have the benefit of his services.

THE "CHARYBDIS" AGAIN. The Toronto Globe's Ottawa correspondent says,—"It is now a year since, with a great flourish of trumpets, Sir James Tilley announced to his constituents that a man-of-war, to be used as a training ship, had been donated by the Imperial Government, and he had the good fortune to be able to secure it being located at St. John, N. B., as a special boon to the great ship-building city. It took nine months to get the rotten hulk to St. John, and \$10,000 of public money were expended on her already, and Captain Scott pointed out in his official description of the vessel, that it would take scarcely ten men to weigh the anchor. The other day the attempt was made by about fifty men, with the result of parting the cable and losing the anchor in the sea. No attempt has been made to carry out the original design of a training ship. No other vessel has been appointed, no organization attempted. A blundering Minister and Acting Minister have succeeded in having the vessel moved in different places where she was found to be always in the way, and several times doing damage to other vessels. The history of Canada affords no more significant instance of ministerial blundering and in-capacity than the story of the Charybdis.

Is it a Joke on Sir Leonard? The Pall Mall Gazette perpetrates a joke on the British Fair Traders which, with slight alterations of place and products might be applied to Canada. It is in the form of a prospectus of the "Sawyer and Grampian Tea Company (limited)," which, it says, is being promoted by an enthusiastic fair trader and advocate of the "case of British labor." It declares that "this company is formed for the purpose of producing, getting ready and expediting the manufacture of tea, and therefore with the greatest advantage to the producer classes of the country," an article to replace the cheap tea now imported from China. It is calculated that tea can be produced on the slopes of Snowden and the Grampians at an expenditure of five guineas per pound, at least for the common sort, while the fine kinds will cost still more. "As nearly the whole of the amount spent will be paid for actual labor in tending the plants, keeping up the fires in the glass houses, getting ready and expediting the manufacture of tea, and therefore with the greatest advantage to the producer classes of the country," an article to replace the cheap tea now imported from China. It is calculated that tea can be produced on the slopes of Snowden and the Grampians at an expenditure of five guineas per pound, at least for the common sort, while the fine kinds will cost still more. "As nearly the whole of the amount spent will be paid for actual labor in tending the plants, keeping up the fires in the glass houses, getting ready and expediting the manufacture of tea, and therefore with the greatest advantage to the producer classes of the country," an article to replace the cheap tea now imported from China. It is calculated that tea can be produced on the slopes of Snowden and the Grampians at an expenditure of five guineas per pound, at least for the common sort, while the fine kinds will cost still more. "As nearly the whole of the amount spent will be paid for actual labor in tending the plants, keeping up the fires in the glass houses, getting ready and expediting the manufacture of tea, and therefore with the greatest advantage to the producer classes of the country," an article to replace the cheap tea now imported from China. It is calculated that tea can be produced on the slopes of Snowden and the Grampians at an expenditure of five guineas per pound, at least for the common sort, while the fine kinds will cost still more.
