

# Graphic proof of high-tech leadership.

**The Casio fx-7000G \$149.95.** It's the world's first programmable scientific calculator with a graphic display. It can give form to your figures, instantly drawing graphs that depict your formulas and calculations.

With a screen measuring 16 characters by 8 lines, the fx-7000G can display enough information for some of your biggest ideas. And you can store graphs and formulas, then bring them back for an instant replay.

With its 422 step memory and 193 functions—including linear regression, standard deviation and computer math—the fx-7000G lets you perform computer functions, without acquiring computer knowledge or incurring computer costs.

For additional capabilities, there's the fx-7500G (\$179.95). It has a larger memory capacity, with 195 functions, 4,006 memory steps, instant graph enlargement or reduction feature, plus a convenient horizontal folding format.

If you need even more power, our fx-8000G (\$199.95) techs you even higher, with 1,446 memory steps and 225 functions. And when hooked up with our optional FA-80 interface, it works with most parallel dot-matrix printers or plotters including Casio's own models.

If you have any doubts as to who's the leader in high-tech calculators, just pick up an fx-7000G, fx-7500G or fx-8000G and draw your own conclusions.
