## Pre-Heating Principle Widely Endorsed

The Chalmers pre-heating principle is now generally recognized as the greatest improvement in automobile motor design in the past three years.

This principle has now received the endorsement of the United States Bureau of Standards and a committee of the Society of Automotive Engineers.

This wide endorsement is due to the marked improvement in motor performance resulting from pre-heating the fuel.

**Chalmers Owners Know These Things**

It is endorsed because it assures better combustion of the fuel. Because gasoline consumption is reduced. Because the motor runs more smoothly, accelerates more rapidly, and performs better in every way.

Chalmers owners know these things by personal experience. They know that their cars run better. That fuel bills are less. That replacement and repair bills are lower by many dollars.

Now this Chalmers reputation for fine performance is becoming more widespread. The public is finding out what a wonderful value this car is.

**Learn These Facts**

People to-day are deeply interested in what a car will do. They want definite information on what it will cost to maintain. Chalmers figures are really extraordinary.

We welcome the opportunity to place these facts before you in detail. We believe that if you will study the data available you will understand why the Chalmers to-day is a wonderful motor car value.
