[No. 11.]

## SOME NEW HARDY APPLES.

We have recently received from Wisconsin some new varieties of very hardy apples, which are being grown in that State because of their good qualities and their ability to endure the rigor of the climate. We give the readers of the CANADIAN HORTICULTURIST a brief description of each sort, in the hope that some of them may be found to be valuable for the colder parts of this Province.

**HICKS.**—This is a very handsome fruit, of medium size, light yellow in the shade, with a bright crimson cheek in the sun, and sprinkled with numerous russet dots. Flesh white, juicy and fine grained, with a mild sub-acid flavor. The stalk is short, set in a narrow, russeted cavity, and the eye is closed, lying in a very regular moderate basin. The specimens received seem to be quite ripe at the present time, twenty-sixth of October.

**MARTHA.**—This apple is quite egg-shaped, nearly red on a deep yellow ground, and striped and splashed with bright red, sparsely sprinkled with minute gray dots. Stalk is stout and short, set in a shallow cavity, basin shallow, somewhat wrinkled, calyx closed. Flesh very light yellow, fine grained, with a very mild, somewhat aromatic flavor. Core quite large, in this respect resembling the Yellow Bell-flower. This is also quite ripe now, but will usually keep well until the holidays.

**WATE.**—A very pretty apple, of medium size, having the skin prettily marbled with red on a rich yellow ground, splashed and striped with dark purplish red. The stem is inserted in a very deep, regular, russeted cavity, the eye closed and set in a regular basin of moderate depth. The flesh is white, stained with red next the skin, a little coarse in texture, with a very pleasant, mild sub-acid flavor. These specimens are fully ripe.
