

A NEW INDUSTRY.

THE Winnipeg Electro-Plating and Novelty Company is the nucleus of a new industry which was established here a year ago and is working up a good business. Little over a year ago, A. C. Foster and a company of others embarked in the electro plating business, contrary to many people's opinion. The industry has increased rapidly, till now they have one of the best equipped plants in that line in Canada.

Their plating is equal to the best and they have competent workmen in all departments.

Notwithstanding the depression in the financial market, trade seems to come to them, and a look at their books may convince anyone, having a large amount of orders booked for spring delivery.

It is always a pleasure for them to explain to visitors different departments of their work and they extend a cordial invitation to all people throughout the Province and Territories to visit them when in the city.

No doubt this infant industry, with the push and energy which the present proprietors possess, will branch out as one of the leading industries of our western metropolis.

THE CRADLE CHURN.

THE Cradle Churn, manufactured only in Canada by Chas. Boeckh & Son, of Toronto, is a Manitoba invention. It was invented and patented by Mr. Hamilton, of Neepawa, Man. Though only a short time in the market, it is now sold all over Canada and is fast becoming the favorite churn. It is much more easily worked than other churns and is more easily kept clean, besides possessing all the other advantages of the best churns of other makes. John E.

Dingman, wholesale agent for Chas. Boeckh & Sons, handles the churn in Winnipeg, together with the other manufactures of the firm.

FARMING FAR NORTH.

WESTERN Canada is an enormous region, so vast in extent that even the residents of the country fail to comprehend its vast extent. Only the southern fringe of the country has been invaded yet by agricultural settlers, and the vast northern regions are known only to the adventuresome fur traders and the native Indian tribes who reside there and dispute possession with the wild animals. The large district known as Athabasca, marked out on the maps as one of the future provinces of Western Canada, contains large areas which are said to be suitable for agricultural settlement, and with a climate not more severe than Manitoba, though farther north.

Henry Lawrence enjoys the distinction of being the principal farmer in the furthest north farming settlement on this continent, latitude 58 degrees and 20 minutes north, some 350 miles further north than Edmonton, Alberta. There are places much further north where some farming is carried on, but only an assistance to other means of livelihood. At Vermillion, however, E. S. Lawrence and Henry Lawrence and several retired Hudson's Bay Company servants who have settled there, depend entirely upon their crops and stock for their living. There is a small steam flour and saw mill run by E. L. Lawrence besides his farm. Henry Lawrence farms about 100 acres and keeps horses, cows, pigs and poultry and raises wheat, oats and barley, potatoes and roots generally with good success. He has been farming for ten years past, having gone to Vermillion in 1884.

Winnipeg Jobbers Union

SALES DEPARTMENT:

134 PRINCESS STREET.

A FULL assortment of all goods required in a General Store can be obtained by the trade at the Sales Department of this Association in lots to suit purchasers, and at prices greatly below wholesale cost.

Do not fail to consider earnestly the importance of this organization, and give it the support it merits, as its continuation depends entirely upon the patronage it receives.

S. A. D. BERTRAND,

SECRETARY-TREASURER,

Office: Corner 2nd Street and 2nd Avenue.
