

4/ had the pleasure of meeting
you again before I had
to return to Australia.

memor
There were many things I
would have loved to have
talked over with you, and
here is the "And Lang Lyne" of
our Mexican experiences!

You may be interested to know
that a few days ago we
came upon conclusive evidence
that our so-called Permian-
Carboniferous Tillites descend
without angular unconformity
into our Middle Carboniferous

Rocks, a fossil flora characterized
by Rhacopterus ^(Aneimites) overlying our
lowest tillite bed. With all

good wishes for Christmas and
New Year to you and yours

I am yours very sincerely
J.W. Edgeworth David
Prof. of Geology
