

## PREFACE.

---

The Papers read before the Engineering Society of the School of Practical Science for the Session '97-'98, are printed in the present volume.

The practical nature of the papers presented will make them especially valuable, and the Society feels grateful to those who have contributed.

The paper by Mr. Elliott on "Electric Power" is one of the best we have yet had, and represents a vast amount of work in the collection and compilation of data.

The paper on the "Production of Steel by the Basic Process," will be of general interest on account of the growing favor with which this process is being received, and the superior quality of steel produced by it.

The work of getting the cuts made has been done by Mr. J. Keele, B.A.Sc., to whose kind assistance the Society is much indebted.

There are fifteen hundred copies of this volume.

TORONTO, April 15th, 1898.
