will give greater quantity and quality combined than for more ordinary or partly barren stalks. The aim of any corn grower should be to cultivate and plant in such a way and sow such seed as will give him the greatest quantity of well-matured corn in the shortest time.

While the ensiling and curing of corn, if fodder or stock, is a broad subject in itself, I just want to emphasize this one point in connection with ensiling corn—that the nearer maturity the corn can get and still remain green, the better food it makes, provided it is put directly into the silo. It is the fermentation of the juices in the corn that makes it that palatable food it is, and if those juices are allowed to become affected by weather or other conditions, a poor product results.

Be sure you know the variety you require, get the best possible seed to be procured of that variety, cultivate, in the strongest sense of the term, and Providence will do the rest.

### The Future of Factory Dairying in Canada

(Continued from page 3)

ready have too many. The proprietor in these cases is not the only loser. The farmers who continue their patronage of the "run-down" establishment must also be included.

A new standard will be required in the future for construction and equipment of factories, and rather more capital will have to be expended. The farmer who has been in the past. Permanent sanitary construction will be necessary, and the old wooden building, with its unsanitary equipment, will not meet the requirements of the city milk or cream trade.

I am not suggesting that these changes will be general in the near future, but it seems to me that any modification that the present factory system may undergo will be along the lines indicated.

### Getting the Work Done

*John Bishop, Oxford Co., Ont.*

"I always calculate to get a job done once I start it. I reckon it's a lazy man who stops on a piece of work half done. When one works to take a rest between times." These words, spoken at every opportunity, accurately describe the method, or lack of method, followed by one of my old neighbors in his work. He will start in an afternoon to prepare a field for grain and work right till dark, then spend the hours between then and bedtime doing his chores by lantern light. If the fences are not repaired by six o'clock, he will keep on till eight or nine if necessary. Anyway, the work has to be done. Like most men who do things in a rush, he also plans to take it easy once in a while, and I notice that the tendency is for the easy streaks to grow wider and wider. As a result, this neighbor's crops are always the last in, his fences are the poorest repaired, and the weeds grow most plentifully in his fields.

How different are the methods of management of the best farmer in this section. Here all the work is planned out. Here all the work is done methodically. All work is done up by six o'clock, except occasionally in the harvest season. There are no easy streaks on this farm. The same amount of work is done every day, and the leisure is taken every evening.

One has only to compare the appearance of these two farms (and they are in sight of each other) to judge of the efficacy of the two methods. The man who is methodical gets the most work done, attracts the best help, and keeps it longest.

### Cow Stalls Everlasting

Equip your stable to last a century by fitting it out with BT Galvanized Steel Stalls, and content floors and walls.

You've seen how quickly old-style wood stalls soak up manure and become unsanitary and unhealthy for the cattle, how soon they rot and break, and how often they must be repaired. You know, too, how much time and trouble and money it takes to be constantly renewing them.

The old way is the expensive way. Try the new. Put in BT Steel stable and you'll have to spend a single cent in repairs for your

### Won't Break, Rot, or Burn

We melt down steel rails to get the 2-inch steel tubing for BT Stalls. They're strong enough to stand the heaviest strain we can put on them. No manure can soak into steel! Steel won't rot! You can't burn steel! BT Steel Stalls will outlast your barn.

Stable acids and moisture do not affect them, for every BT Steel Stall is carefully galvanized in our factory. The galvanizing material enters right into the pores of the metal, so BT Steel Stalls won't rust. They always look bright and clean in the barn.

The Barn at the Boys' Farm and Training School, Shawville, Quebec, was equipped with BT Steel Stalls 3 years ago, and has twice burned to the ground. After the last fire, Matthews, principal of the school, wrote us:

"The contractor, with the permission of the directors, is going to use the 20 BT Steel Stalls again—they have been through fire twice, yet are as good as new, except for a few replacements, as when we put them in first."

**BT Cow Stalls, Stanchions, Bull Pens, Calf Pens, Waterbowls, Columns—all of Steel**

Think of the amount of stable work BT Galvanized Steel Equipment saves in a single year. It's always so easy to keep clean. No cracks or corners on the smooth, galvanized surface to collect dust or dirt. The steel can be washed off in a moment, and the stable kept unpleasant odors. Cows are healthier and give much more and much better milk.

### Easy to Install

BT Steel Equipment is very simple to erect in the barn. The Stalls come ready to set up from our factory, and can be put up in a few moments, by tightening up the three large bolts on each stall. You can get the whole job ready for the contractor in a single afternoon, or you can get the whole job. We send blue-print plans to show widths for cattle stanchions, gutters, pipes, etc., so you can build or remodel your whole stable yourself. Before you build or remodel your barn this year get our free book No. 21 that tells all about BT Galvanized Steel Equipment. Investigate every fact for yourself, and learn about every money-saving advantage.

### Barn-Barn Service Free

Let Beatty Bros. help you plan your barn this spring. We'll show you how to build a much better barn than your neighbours have, at less cost, how to lay out the stalls to be handsier for churning and to hold more stock, how to light and ventilate it better, and how to frame it more economically. Also we'll send you our valuable book "How to build a dairy barn."

Send the coupon to-day to

**BEATTY BROS., Limited, 1283 Hill St., Fergus, Ont.**
