

Who Pays the Duty?

You can't get away from the fact that **directly or indirectly the DUTY has to be paid by the consumer**; therefore, why pay fancy prices for calf meals of foreign manufacture when you can buy **CALFINE** 15 to 20 dollars a ton cheaper and secure at least equal, and in most cases superior, results.

CALFINE

"The Stockman's Friend"

is a pure, wholesome, nutritious meal for calves. It is now in use on many of the largest and best equipped dairy farms in the Dominion.

Ask your dealer for a 100 lb. bag of **CALFINE** as a trial—you will soon be back for more. If your dealer does not handle it, write us. We will do the rest.

Holstein Bulls for sale—Springbank farm is offering two choice bred Holstein bulls for sale at reasonable prices. For particulars write to: **Wm. Barnett & Sons, Living Springs P. O., Ont.** Ferguson station, C. P. R. and G. T. R.

The vicar had been suddenly ill, and his church warden was in great difficulty about getting a substitute, when the bishop of the diocese kindly offered to take the Sunday services himself.

The church warden, wishing "to do the right thing," at the close of the service, went up to the bishop and, after thanking him, stammered out:

"A poorer preacher would have done such folk as us, your lordship, but we were unable to find one!"

QUESTIONS AND ANSWERS. Miscellaneous.

GOAT FARMING.

As a subscriber to "The Farmer's Advocate," I would like to know if goat farming would be a profitable business in this country, and would they stand the extreme cold?

B. B.

Ans.—It is doubtful whether goat farming would prove successful in Quebec, although, with special care, it might bring in fair returns. Goats are not used in this country for milking purposes, and the trade would necessarily be largely with fanciers. Goats require to be housed at night throughout the year, and day and night during the severe weather of winter. Goats cannot be herded together like sheep, for those with horns use them disastrously against their weaker fellows. The young kids are more tender than young lambs, and do not withstand the cold nearly so well.

LINE FENCING.

A and B own each one hundred acres of land, one at the back of the other. A has a fence at the back from 3 to 8 rods away from the line, onto himself. B has a fence too, further away from the line. There are some 20 rods without a line fence at all. A and B have had peaceable possession until now. They agreed about the putting up of a new line fence, each to put up half. B comes onto A and takes rails off A's fence to build B's share of line fence without any permission whatever. All A's fence was put there some years ago, by the owner then, from the center fences. He being a cattleman, and to take care of his cattle, built the fence all himself with his own rails, this 3 to 8 rods from the line.

1. Can B come onto A's place and take A's rails and build B's share of line fence?

2. Can A pull down the fence that B has built of A's rails and take them back to build A's share of line fence?

3. Has B any claim on land between the line fence and A's fence?

4. Any other advice will be thankfully received.

A SUBSCRIBER.

Ontario.

Ans.—1. No.
2. Yes.
3. No.

4. In recovering his rails A should be careful to avoid a breach of the peace; and in the event of his being interfered with by B while in the act of removing the rails he should consult his solicitor as to his next step.

AIR-PRESSURE WATER SYSTEM

I would like to hear, through your paper, of anyone having a watering system and tank for stock that is operated with the air system, forcing the water through the stables by air pumped into tank. What would it cost to get a tank to hold 500 gallons, and what is the cost of a pump, and is the system satisfactory?

J. D. G.

Ans.—The air-pressure system has been found by many to be quite satisfactory. In this system an iron cylinder similar to the hot-water boiler in common use, but larger, is attached to a pump driven by hot-air or gasoline engine, and pipes leading from the cylinder to points of use. As pumping proceeds, water is forced into the cylinder, which is already full of air, and soon a high pressure is generated. When a tap at house or barn is opened, the air pressure forces the water from the tank through the pipe and out at the tap. This method has the advantage that the tank may be placed in the basement away from frost, and avoiding the danger of damage by water, should any leakage occur. These systems are usually installed to supply both house and stable with water, and the tank is very often located in the house basement. If there is no room in the basement, the tank may be located outside underground to avoid freezing. Inside in the best place for it, however, a hot-air engine suitable for this system would cost about \$200, and a tank about \$100, after which there would be the piping and taps to be reckoned. A good size and shape of tank or cylinder, is one 3 feet in diameter and 10 feet long, placed horizontally. Of course, it must be air-tight and made of steel. If the tank becomes water-logged, all that is necessary is to open a small valve at the pump and pump in air. Where practicable, this is one of the best systems in use.

THE SUMMER PESTS

At last you can keep flies off your cattle

With the thermometer rising up continuously, think of the suffering of your domestic animals that are tortured by flies, mosquitoes and other insects.

As an experienced farmer YOU KNOW that the torment to which your cattle is submitted during the summer months, exhausts them, causes them to decline, to lose weight, and in many cases even endangers their life.

There is **only one way** to keep away the flies, destroy all parasites (lice, ticks, fleas, etc.), and restore your animals to perfect health. Simply sprinkle that most wonderful insect destroyer and disinfectant

COW COMFORT

on your cows, horses, swine, goats, sheep, dogs, poultry, and all insects will be quickly destroyed. The chemicals in this preparation will positively prevent flies and mosquitoes from swarming about your animals.

Cow Comfort also has soothing, antiseptic qualities that will cure all sores or skin diseases that may affect your cattle.

We cannot insist too strongly upon the benefits YOU will derive from the use of Cow Comfort on your cows—you will find that when they are rid of flies and other insects their yield of milk will be greatly increased and of better quality.

Sold in gallon cans at \$2 each, but as the contents of a can are to be diluted in four gallons of water, it makes the price really 40 cents a gallon.

Write for descriptive circular—it's free.
