

**Increase Your
Crops and
Save Labor**

The Massey-Harris Spreader

makes a given amount of manure cover more ground and applies it so that all of it is available as plant food—Each acre will yield more than if given a heavier coating by hand. This means

**MORE ACRES COVERED AND
EACH ACRE MORE PRODUCTIVE**

Especially useful for top dressing field crops, meadows and pasture land, none of which can be satisfactorily accomplished by hand.

THE SAVING OF LABOR

One man or boy with this spreader does the work of four or five men—if the men could be got hold of—but probably you couldn't get help, and much valuable manure has been wasted, while the fields suffered for the want of it.
