

health, security and financial resources of the global community. In many parts of the world, infectious diseases and deaths from infectious disease have risen sharply in the last decade for a variety of reasons, including the emergence of drug-resistant microbes and the increased movement of people and products.

32. In the coming year, our governments will promote more effective coordination of international responses to outbreaks; promote development of a global surveillance network, building upon existing national and regional surveillance systems; and help to build public health capacity to prevent, detect and control infectious diseases globally including efforts to explore the use of regional stocks of essential vaccines, therapeutics, diagnostics and other materials. Central to this work will be strengthening and linking existing activities in and among each of our countries, with developing countries, and in other fora, especially the World Health Organization. We support the efforts of the WHO and the recent World Health Assembly resolutions regarding the quality of biological and pharmaceutical products.
33. Preventing the transmission of HIV infection and the development of AIDS is an urgent global public health imperative. While other prevention and treatment methods must be pursued, in the long term the development of safe, accessible, and effective vaccines against AIDS holds the best chance of limiting, and eventually eliminating, the threat of this disease. We will work to provide the resources necessary to accelerate AIDS vaccine research, and together will enhance international scientific cooperation and collaboration. Cooperation among scientists and governments in the developed and developing world and international agencies will be critical. We call on other states to join us in this endeavor.
34. The Joint United Nations Program on HIV/AIDS (UNAIDS) must help expand the scale and quality of the response to HIV/AIDS. As a group and with others, we will work to assure that it has resources adequate to fulfill its mandate.

#### NUCLEAR SAFETY

35. We reaffirm our commitments from the 1996 Moscow Summit on Nuclear Safety and Security to give an absolute priority to safety in the use of nuclear energy. We note that further substantial progress is still required in the countries of Central and Eastern Europe and in the Newly Independent States, especially by strengthening regulatory authorities, enhancing reactor safety and improving safety culture. We consider further joint efforts to this end a major priority. In this regard, we attach the greatest importance to the full implementation of the Nuclear Safety Account agreements.
36. We note with satisfaction the entry into force by the Nuclear Safety Convention and the preparations now underway for the first review meeting to be held in April 1999. We applaud the rapid progress made in developing the Joint Convention on the Safety of Spent Fuel Management and the Safety of Radioactive Waste Management and encourage finalization. We welcome the forthcoming adoption of the Protocol to amend the Vienna Convention on civil liability for nuclear damage and of a new Supplementary Funding Convention. These conventions will facilitate international safety cooperation and provide for increased compensation for victims in the event of a nuclear accident.
