certainty of the casual revenue being laid out on objects within the province; for I swear to you, by the faith of an honest man and a Christian, as well as by the honor of a gentleman, that the garrison has lately received a reinforcement of the little dragons of...

"Noble General!" he said, pointing to the former, "is this our garrison?" and he added, taking his sword in his right hand, "is this reinforcement of which I told you?"

He then stopped dead and looked the delighted mother and her joy, and the delighted shepherd to boast for many a summer day and winter night, of the success of his strategy.

He Honor, the Chief Justice said, that it appeared to be agreed on all hands, that the principle of his bill was to be maintained; because it was the ratification of a compact made with the Crown, Government of a most advantageous nature for this Province. By this compact, the King granted...

"I have a bill, which I have brought up, which will be of great service to the Province, and which will be of great service to the Province, and which will be of great service to the Province..."

only for a valuable consideration, and that they should not be improperly admitted and rendered unproductive. The only security that the country had required in this bill, was that the lands should be conveyed to the highest bidder; the principle involved in the 5th section was merely, that such sale should take place; but all the details of management were still left in the hands of the Crown, as heretofore. The section merely sets out a general principle, for the security of the country, to prevent any system of favoritism or improper favouring a way of breaking other sources of the revenue, and it was but a fair and proper principle and condition of surrender.

It was urged, elsewhere, that there might be a change of ministry at home, and that the bargain might therefore be broken; but would any body venture to say, that there was no other man in the world that would consent, on his Majesty's behalf, to such a bargain as Lord Glenig had made? Certainly, that would never be asserted. The faith of his Majesty's government and the mother country was not pledged to the measure and of course it would be fully maintained by any succeeding ministry.

presence from moderate warmth. To prove this, they have also by artificial means, produced degrees of cold far below any which have ever been experienced in ordinary circumstances. Heat can be brought into action in all substances by percussion and rubbing. Thus, a quantity of common salt, suddenly compressed, gives out a spark of fire.

Heat can be brought into action in all substances by percussion and rubbing. Thus, a quantity of common salt, suddenly compressed, gives out a spark of fire. A piece of iron can be raised to red heat by beating it with a hammer. A fire can be kindled by rubbing two sticks, and a coach wheel, not sufficient to action in any substance, the substance expands to a great bulk, and a mutual repulsion of all the particles. Water under such circumstances, boils over the edge of a pot; a globe filled with air bursts with an explosion; and a bar of iron is stretched to a greater length. But it is remarkable, that heat produces no perceptible effect upon weight, which would seem to denote that it is not a substance, but only a quality.

Heat is also produced by the burning of certain combustible substances, as coal and wood; and in this manner its chief purposes in domestic economy are realized. But the most remarkable source of heat is the sun; though whether this luminous is a burning mass throwing off warmth like a common fire, or red hot ball of glowing fire, or a peculiar operation of a different kind, is yet uncertain.

The warmth of the atmosphere is liable to be effected by many circumstances, and chiefly rendered more so by the rays of the sun, which strike the sun sends his rays with the greatest degree of directness. In the parts of the earth adjacent to the north and south poles, he frusts his heat so sparingly, as to have little power, and there accordingly the air is seldom of a genial mildness. Great spaces of sea tend to equalize the degree of heat and cold from the sun's rays, and the 70 summer heat is the contrary effect; hence a place a few degrees from one of the tropics, if in the centre of a vast tract of land, will be liable to greater extremes of cold than any place comparatively remote from the tropics, which are surrounded by the ocean.

Dinner to Sir Robert Peel, in Edinburgh—When it became known that Sir Robert was to visit Glasgow, it was deemed right that he should be invited to a dinner in the metropolis. The proposal was instantly agreed to by the Conservatives of Edinburgh, who took the lead on the occasion. The preliminary matter was carried into effect, and the result was that in three days 1,750 names were subscribed to the invitation.

Mr. David Hamilton, architect, has furnished the Committee on the Peel banquet with a magnificent design for a pavilion. It is a pentagon in shape with a square side next Buchanan street, and two galleries for the ladies. Mr. Hamilton contemplates accommodating 1,200 at dinner, and probably 700 or 800 more afterwards. Applications for tickets continue to pour in from all quarters.

There is every probability of Friday, the 13th January being the day fixed upon. An expense will be spared to render the whole affair the most splendid that has ever taken place in Scotland. The galleries for the ladies will contain 300.—Glasgow Courier.

The Board of Assistants Alderman of New York have recommended that hereafter the sales of bread be regulated by weight; that the loaves shall be of uniform weight of one, two, three and four pounds each; and that for every violation of the law, a fine of ten dollars shall be imposed; and that the bread found to be of under weight shall be seized and given to the poor.

The ingenious R. L. Stevens of Hobeoken, has invented a shot which is hollow, and is filled with some kind of fulminating powder which is ignited by the compression of air when it strikes the sides of a vessel, and on its explosion is sent by the force of the explosion, will tear all its atoms! This system when perfected, will supersede the employment of men as crew in a ship of war, and will be easily destroyed by a gun boat. Ships of war would therefore, be the class of vessels most required, and our waters are sufficiently deep for this purpose.

Beat this—Anthony Hoffman, of Pine Plains, killed on the 19th ult. a hog twenty-one months old, which weighed 590 lbs. and sold for \$100.

Death of the Earl of Devon.—This respected nobleman terminated his earthly career on Friday morning, about five o'clock. George Murray, Earl of Devon, was born in 1723, and succeeded his father, John, in 1807; he was 74 years of age. At the period of the Reform Bill he was created a British Peer, and lent his aid in carrying the Reform Bill through the House of Commons. He was a member of the House of Commons, and the Hon. Charles Augustus Murray, besides a younger son in the navy.—Scotsman.

Public Dinner at Falkirk.—On Thursday a public dinner was given at Falkirk to Henry Salton, Esq. of Edinburgh, by the Town of Falkirk, to mark on his retirement, the respect of the inhabitants for the manner in which for three years he had discharged the duties of that office. A number of one hundred gentlemen sat down to dinner in the Assembly Hall, Provost Aitken in the chair. Many appropriate toasts at addresses having been given during the evening, the company separated, highly delighted with the opportunity of doing honor to their respected guest.
