

DEPARTMENT OF COMPUTER SCIENCES

OPEN HOUSE

The Department of Computer Sciences is having an Open House this autumn. On Saturday October 27, between 10:00 a.m. and 2:00 p.m., members of the York Community will have an opportunity to see various aspects of the computing services provided at York. One will be able to visit the machine room of the York-Ryerson Computing Centre to see the ITEL AS/6 and DECsystem-10 machines "in action". Also on display will be various types of computer terminals, the CalComp plotter, as well as the Four-Phase Data Entry System for administrative users. The tours begin with coffee and doughnuts in room T.103 Steacie Science Library; faculty, staff, students and their respective families are all welcome.

Your career is our future...

As you approach the end of your academic career, you have undoubtedly begun to ponder the future. Where will all these dedicated years of study lead you? Perhaps you have already chosen the career path you'd like to follow. How will you go about achieving it? You see it all beginning with that very important initial step - your first job. It will be one of the most influential experiences of your career.

At Bell-Northern Research, we understand how important that first job is to you. After all, it's not that long ago that many of us embarked on our own careers. We would like to help you achieve your career aspirations by offering you the challenge of working in one of the foremost research organizations - a Canadian Corporation, owned jointly by Northern Telecom Ltd. and Bell Canada. We have some of the best people in Canada, if not the world - over 2500 young and enthusiastic people like yourself who have helped Bell-Northern Research achieve its enviable reputation throughout the world.

Bell-Northern Research continues to advance the technology in a number of specialized areas ... software, computer-aided design, microprocessor applications, silicon device design and processing, solid state device physics, digital communications, circuit design, fiber optics, systems planning, network analysis, human factors and many more ... exciting fields of endeavor that require the talents of people like yourself.

We'll be visiting your campus November 29th & 30th and would like to meet with you to talk about your future. Even if you're not graduating this year, perhaps we can help you prepare for the future by offering you a summer position, or simply providing you with information about career opportunities, in your field of interest. Watch for our posters in your faculty area or drop down to the Placement Office to find out a little more about what we have to offer.

Bell-Northern Research Ltd.
P.O. Box 3511, Station C
Ottawa, Ontario, Canada
