COWS ARE COWS, ARE THEY?

WHEN AGE COMES ON

A leading agriculturalist says: Week after week you find formulas for balanced and good rations for the the danger of some contagious disease There are more good cows in the cows. You select one that you find being introduced, that will take years to eradicate, there are being unloaded Babcock tester and the milk records upon this country hundreds of inferior are doing the same to the dairy introduced types of horses, that will take the dustry that spraying has done to the knowing ones. You weigh the milk place of good Canadian horses, fruit industry. The apple orchard that of which we have more than is not sprayed has ceased to be a blended meal or flour. One cow does exceedingly well, another gets off her feed, while aonther gets feverish and her udder cakes and endless trouble ensues. This is not supposition, as too often visit dairymen who have had just these troubles and ask me to help them adjust matters. The first thing to do is to get acquainted with your cows. The next is to learn how to feed them according to their individual needs and capacities. Some dairymen tell me they cannot afford to "monkey" with cows that cannot stand up under high pressure work. All right, if you can afford better to ruin and lose some of your cows than to use your judgment and common sense it is none of he other fellow's affair. Every feeder who has worked to make records or o put cows into advanced registry will tell you that the cow must be ther say that the man who cannot find time or has no patience to "monkey" with individual cows had treated as an individual. I would furbetter go into the machine shop or into the mine where he has to do with inert matter instead of with living and sentient beings.

EXPENSIVE ECONOMY

Economy is good, but it makes one smile to see how some folks practice it. In order to save a nickel they will spend time and labor worth far more than the amount saved; others will buy an inferior article, or do without something they really need in order to save a trifle, when the expenditure of a little additional would bring much greater proportionate value. This false economy is shown in many ways. First, in the feeding. If you tell a man he is not feeding his hens enough he will say, "I can't afford to feed more they do not pay for their feed as it is He is just feeding enough to keep h fowls alive without having anythin left over to make eggs. That feed i practically wasted; it prolongs the life of his fowls without bringing any re turn. But if he would add to it proper amount, in suitable variety, egg-building material, the hens would pay for it three or four times over Those who get plenty of eggs are good feeders; those who do not get eggs. as a rule, feed too little or too much We Eat Too Much Meat, Which of one kind. It is often said, "Don't feed too much; your fowls will get fat." But where there is one who feeds too much there are many who feed too little; and with a well-balanced ration there is little danger of over-

feeding. Then if you tell an inexperienced poultry keeper on a small scale that he ought to feed a variety, to give a
