
Spent fuel. Fuel that after some time in a nuclear reactor is no longer effective for the production of energy needed for electricity generation.

SSSF. Single Small Scale Facility. An SSSF is a facility that produces very small quantities of Schedule Chemicals for research, medical, pharmaceutical or protective purposes. Such facilities are permitted under the CWC but are liable to routine inspections.

Verification. Verification measures, such as field monitoring and routine and challenge inspections, that provide confidence in compliance with international disarmament or non-proliferation agreements. On-Site Inspection (OSI) is an integral part of both the CWC and the CTBT.

Zangger Committee. Group of nuclear exporters formed in 1971 to develop a common understanding on how, with respect to nuclear exports, to implement their non-proliferation commitments as set out in Article III.2 of the NPT. Zangger was the name of the first Chairman. The Committee now has 34 members.
