ENZYMOL

A Physiological Solvent

Enzymol dissolves all septic matter, corrects offensive odors, and imparts a healthy stimulus to the diseased surface.

Enzymol is potent and entirely painless as a solvent, and is without action upon the normal tissue.

Enzymol is a solvent for false fibrinous membrane, blood coagula, muco-pus, necrotic and carious bone. It may be freely applied to all surfaces and cavities from which it is desired to remove dead tissue, pus, etc., and to aural and nasal cavities, urethra, bladder, etc.

Enzymol has been found to produce remarkably healing effects upon indolent ulcers, sores and wounds, which have resisted all other treatment.

Originated and Manufactured by

FAIRCHILD BROS. & FOSTER, New York.

Enzymol is put up in four ounce vials, with directions for use, and it may be obtained of all chemists in the United States and Canada. Literature on the use of Enzymol as a surgical solvent sent gratis upon request.

PRINTED BY JAMES BOWES & SONS, 142 HOLLIS ST., HALIFAX.
