

A Truck for the Farmer

FARM equipment which will effect a time and labor-saving, and therefore a money-saving, must be carefully considered by every good farmer now-a-days.

The farm wagon, which for years was the most useful of all farm equipment, is now being replaced on the best farms by a sturdy, dependable motor truck. The truck will haul any farm product—fruit, grain, vegetables, stock, fertilizer, or wood-around the farm, or to the town or city many miles distant, in half the time, and at a much lower cost.

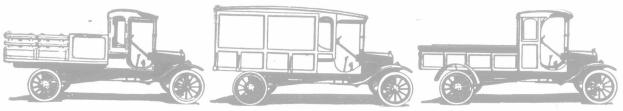

The Ford One-Ton truck is a rapid, economical and very serviceable means of transport. One of these on your farm will save you weeks of time in a single season and will enable you to pass through a crisis of labor shortage with less difficulty.

The Ford truck is supplied as a chassis only. This permits you to select any of the many body styles especially designed for the Ford truck and already on the market. Thus you can mount the one which suits your individual requirements.

Price \$750 f.o.b. Ford, Ont.

be ministered unto but to minister and

to give His life a ransom for many! Two things then are clear-we are going to pay greater attention to the individual in time to come, and we are going to be more wisely altruistic. "The world at the close of this war will be molten, but it will cool," is a statement ascribed to Lloyd George. This is the time, then, to make an impression, if we want to mould for the best the coming generations. Now is the time to sow finer and better ideas of citizenship, and not "after the war," or a decade from

now. We should sow in the spring-time The founders of our civilization all emphasized the importance and necessity of religious teaching and training. The soul and life of ethics and morality is a Our experiences as individuals and as nations verify this belief. He who runs

I have a strong offering at present of bull calves out of "Dairymaid of Orkney" and others closely connected with "Milkmaid of Orkney", "Primrose of Orkney" and "Lenore 2nd." Yearling heifers bred to our imported sire, "Dunlop Corolla". Attractive prices quoted for immediate sale. Inspection solicited.

his religion. How to do it in the best JOHN A. MORRISON, Mount Elgin, Ontario Ridout & Maybee Crown Life Bldg. Toronto, Ont.

way is another question. But until some common way is decided upon each family and creed must take it up the best way they know.

In the next place our faith and belief in the moral order of the world must find practical application. Theories must be worked out in practice. This war is the opening of a campaign. It is the opening shot and shock of a new age. The Allies have just started out on a missioner. have just started out on a missionary tour. The evils of the world are not all Those that think that in Germany. Prussianism should not oppress should inquire whether any of it is going on among themselves. Despotism takes many forms; military, political and ecclesiastical. It is a very insidious foe. It creeps in unawares just as the serpent did into Eden. I quote a statement made not long since by one of the religious educational leaders of America:

"I tell you this war is a hundred years' war and will continue when the cannon have ceased to roar. As democracy must overpower autocracy in this political conflict, so official autocracy must die before educational and religious democracy after this world conflict with physical arms has been completed. The present crisis is not due to the failure of Christianity but a fractional religion that allows a sect or a nation to own God and determine His programme for mankind. This war has proved the idea of world nearness and unity. It is also the forerunner of world leagues and federations and is paving the way for the Kingdom of God."

In the present crisis democracy, although but poorly established, has stood the test with glorious credit. It makes one think that there is nothing better on earth than to trust the people, educate them, take them into confidence with the rulers and organize them for state efficiency and world uplift. They will respond wholeheartedly to the right appeal—R. O. ARMSTRONG.

Autumn Cultivation For Weed Control.

The ploughing of the land in the fall is desirable as a part of the regular work of the farm, since it enables the ground to be got into proper condition for sowing the seed in spring considerably earlier than would otherwise be the case. But it is perhaps of even greater importance as a means of keeping weeds in check. In the case of perennial weeds the mere turning up and exposing of the root stocks to the action of the frost will serve as a considerable check to the weeds in cases where they are not killed outright. Where it is desirable to collect and burn creeping root stocks this can be more readily accomplished where the ground has been pulverized by the frost and snow of winter.

In the case of annual weeds these are of two classes from the point of view of their life-history. One group requires a resting period before the seeds will germinate and this holds good even if the conditions with regard to moisture and temperature are suitable. These normally germinate in the spring of the following, year after they are shed, but in many species the germination can be delayed for several years if the seeds are buried to a considerable depth in the soil. This is true of such species as wild oats and wild mustard. Each time the surface of the ground is disturbed some of these other seeds are allowed to fall into the soil in the meantime, the ground will eventu-

ally become clear of them. In another group of annual species known as winter annuals, the seeds germinate immediately after they are scattered and pass the winter in the form of a small seedling plant which survives under the snow and resumes growth in the following spring. Belonging to this group are the following weeds: chess, purple cockle, night-flowering catchfly, stinkweed, shepherd's purse, false flax, ball mustard, wild radish, hare's ear mustard, tumbling mustard, peppergrass, wormseed mustard, corn gromwell, blue bur or stickweed and stinking mayweed. It is in the case of these weeds that autumn cultivation is specially desirable as if they are turned under with the plow and covered sufficiently deeply, very few of them will be able to continue their growth after the snow melts.-Experimental Farms Note.
