THE TIME BALL On Top of Custom House Buildings, St. N and after MONDAY, the 22nd December, each day (Sunday excepted), will be hoisted half its elevation at fifteen minutes before 1 o'clock; at one minute before 1 o'clock it will be at its full height; and at 1 o'clock mean time, the Ball will drop. A chronometer keeping correct Greenwich time should then show 5h. 24m. 15s.; and the difference between this and the time shown by a chronometer is its true error on Greenwich time at that moment.

As the above hour of 1 o'clock, when the Ball drops, represents 5h. 24m. 15s. at Greenwich, the error of a chronometer may be ascertained no matter where the ship is lying.

Masters of vessels arriving at St. John should compare their chronometers by the Time Ball, as it will enable them to get the sea rate, which frequently varies from the harbor rate.
