

A handy book on home decoration

(With furnished rooms in colors)

Think of the time saved in worry and experimenting. Think of the possibility of avoiding serious mistakes. Some of the subheadings show just how practical this book is: "The Influence of Color"; "Light and Shade"; "Harmony in Colors-How to get the Right Effect"; "Value of Conventional Designs"; "Plain Tinting"; "Color Values."

Alabastine

Sanitary Wall Tints If you are going to decorate a room or your whole home, enclose 15 cents in your whole home, enclose 15 cents in coin or stamps and get a copy of "Homes Healthful and Beautiful." It gives many a useful hint for the treatment of bedroom, living-room, dining-room, halls, parlor, including even the kitchen.

Questions and Answers.

Veterinary.

Embolism

Filly now four years old that has worked only one-half day, has shown the following symptoms for two years. After taking a run she loses power of one hind leg, sometimes the right, sometimes the left. After a few hours she becomes apparently all right. There is no swelling or visible cause for the trouble. Would it be better to work

Ans.-We do not see how you could The symptoms indicate work her. embolism (a partial plugging) of the illiac arteries. When at rest there is sufficient room for the circulation, but upon exercise the circulation increases, the blood cannot all pass the embolism, the artery becomes distended, presses upon the nerves and causes paralysis. There is little probability of recovery. Try giving her one dram of iodide of potassium three times daily. If this affects the appetite reduce the dose to 40 grains.

Chronic Suppurative Mammitis.

Last summer, before farrowing, a growth broke out on one mamma of my sow. It healed and apparently got all right. She will be due to farrow again on May 11th. Now there are wo large growths and a number of smaller ones on her mammae. One is raw and bleeding. Every little while it becomes like that and discharges bloody matter.

Ans.—These are either abscesses or malignant growths. It would be wise to have her examined by a veterinarian, as, if they be malignant tumors, they must be dissected out, and even at that a regrowth would be probable. If abscesses they should be lanced freely to allow escape of pus, and the cavities flushed out three times daily until healed with a 5 per cent. solution of carbolic acid, or one of the coal-tar antiseptics. It is very doubtful if the milk will be healthful.

Lame Horse.

Driving horse has gone lame on his off fore foot. He shows no tenderness upon pressure or tapping, but a slight ever exists in the coronet and hoof He had a ring-bone which was fired and killed several years ago. Lameness is very marked, and increases if he is driven on the road. The services of the horse are indispensable for spring work, hence advise treatment ac-

Ans.—It is very easy to say "advise treatment accordingly." The symptoms indicate that the ring-bone is causing the lameness, notwithstanding the fact that lameness disappeared after firing several years ago. If this be the case it will be necessary to fire and blister again, and this will necessitate rest All that you can do until you can give rest is poultice the foot every night to keep it from becoming too dry and as soon as circumstances will admit, have him examined by a veter inarian, and if his diagnosis agrees with ours he will fire and blister.

Fatality in Cow.

Cow was bred on the 6th. On the 8th she became sick, trembled and groaned. I gave her turpentine and Epsom salts. Her bowels worked well. but she would not eat, and after drink ing she would bloat. On the 5th day died. A post mortem revealed all organs normal, with the exception of the gall bladder, which was 3 time: its normal size.

International No. 2 Cultivator

This most useful and profitable implement—the International No. 2 Cultivator—will do good work on your farm. It serves the double purpose of cultivating your soil and thoroughly ridding the ground of weeds. For forming a mulch of dirt to conserve moisture, for keeping down obnoxious weeds, for summer fallowing, you could not own a more economical implement.

The main frame of the International No. 2 is of angle steel, more than strong enough to keep the teeth at their work in all conditions of ground. The teeth follow the unevenness of ground, being independent of each other. They cannot twist out of position, and strong springs protect them. One easyworking lever and rock shaft controls the cultivator. Note the steel wheels and axles—only the International has them.

Either spring or stiff teeth are furnished At little added cost you can have both sets, giving you a splendid outfit for all-round use. The stiff teeth cut the whole surface of the ground. They are excellent in getting rid of thistles and woody-stalk weeds. The spring teeth points are reversible, giving double wear. The cultivator can be equipped with grain and grass seeding boxes.

See the agent who sells the International No. 2. Write the nearest branch house for catalogues.
