

## Welded Pipe Sections— and Better Galvanizing

NOT content with having "Frost" Gates imitated we have installed a modern galvanizing plant for coating the frames of all plain and fancy gates. Thus, we are able to give "Frost" Gates a more permanent finish than their imitations. The pipe is first put through a pickling process which removes all dirt, grease and scale, so that the galvanizing not only spreads all over the surface of the metal, but goes into it, filling up the pores and giving an even, smooth and exceptionally durable coating.

Furthermore, "Frost" Gates have the distinction of being the first in which the frame is not weakened by having the "thread" cut half way into the pipe in order to join it to the coupling. No "threaded" ends—no couplings—in "Frost" Gates. Instead, the pipe sections are WELDED together, making the part that was heretofore the weakest now the thickest and heaviest. And by welding, the tubing is made continuous—the gates are free from unsightly couplings.

When ordering, don't just ask for a metal gate. Specify a "Frost" Galvanized Gate. No extra charge is made for the welded-improvement or for the more handsome and permanent finish.

There is a hustling dealer in your neighborhood who makes a business of supplying "Frost" Gates and building "Frost" Fences. If he is not known to you, write us.

FROST WIRE FENCE CO., LIMITED, HAMILTON, ONTARIO.
