Northern Ontario

The forest and mineral wealth of Northern Ontario has attracted many people from all parts of the civilized world.

One ninth of the world's reported output of silver in 1908 was taken from Ontario mines.

New discoveries of undoubted richness are being constantly reported from sections far distant from the far-famed Cobalt. Yet a more certain reward is insured to the settler who acquires for himself 160 acres of the rich agricultural lands now open for settlement and made accessible through the construction of railways and Colonization Roads.

The fertility of the soil is unsurpassed. The timber is in demand at a rising price. Mining, railway and Colonization Road construction, lumbering, etc., afford work in abundance to those who have not the means to remain on their farms continually. These also provide a market for farm produce at prices unequalled anywhere.

Cochrane, the terminus of the T. & N. O. Ry., on the G. T. P. Transcontinental Railway, now under construction, is in the same latitude as the southern part of Manitoba, and 800 miles nearer the seaboard.

That the experimental stage is past is clearly demonstrated. The country is rapidly filling up with settlers from many of the other Provinces, the United States and Europe.

For information as to terms of sale, homestead regulations and for special colonization rates to settlers and for settlers' effects write to

Parliament Buildings, TORONTO.
HON. J. S. DUFF,
Minister of Agriculture.

Synopsis of Canadian North-west Land Regulations.

ANY person who is the sole head of a family, or any male over 18 years old, may homestead a quarter-section of available Dominion land in Manitoba, Saskatchewan, or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.

Duties—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres, solely owned and occupied by him, or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing, may pre-empt a quarter section along side of a railway. Price, \$1000 per acre. Duties: Must reside six months in each of six years from date of homestead entry (including the time required to secure homestead patent) and cultivate fifty acres.

A homesteader who has exhausted his homestead right, and cannot obtain a pre-emption, may take a purchased homestead in certain districts. Price, \$1000 per acre. Duties: Must reside six months in each of three years, and cultivate fifty acres, and erect a house worth \$500.

W. W. COOKE,
Deputy of the Minister of the Interior.

How Frost Fence Saves One-third in Posts

The new Frost Fence is the strongest in Canada. It can be safely stretched tighter than any other.

And because of that, it saves about one-third in Fence Posts. Just think what that means to you. And tests are proving this to be accurate.

You see, we have at last arrived at a correct solution of Canadian Fence requirements. And we didn't arrive here by guess-work, nor say-so, either. It took years of experimenting, studying and tests.

Make Our Own Wire

You know, nearly every Wire Fence ever put up in this country has given up its life from 12 to 15 years sooner than a Wire Fence should. Although that very same grade of Wire, and that same thickness of Galvanizing, has made good in other places.

Our researches have proven that the real cause of failure is nothing short of extreme climatic changes in Canada.

The Wire formerly used for the Frost Fence was made under our own specifications. It always gave better service than any other Fence in Canada. But it could not constantly overcome this destructive Canadian Climate.

So we now Make and Galvanize our own Wire. Frost Wire cannot be affected by that enemy which ruins other wire.

And we are the only exclusive Fence people in Canada who Make Wire.

Rusts Out Life

That climatic business which we were telling you about simply rusts the very life out of the Wire's Galvanizing.

Although two-thirds of the life of a Wire Fence depends upon Galvanizing, that on nearly every Fence in Canada is too thin.

Galvanizing won't adhere permanently to greasy, scaly Wire, will it? That grease and scale will drop off some time, and away goes your galvanizing.

But the Frost Fence is Galvanized about 100 per cent. thicker than most Fence.

Because every speck of grease and scale has been removed from Frost Wire by three "Cleansing" processes.

This leaves the surface as clean as a pin. The Zinc not only spreads over the surface, but it goes into the Wire, becoming a part of the Wire itself.

A poorly-cleaned surface is one reason why nearly all Wire is untitlingly Galvanized for Canadian purposes.

But perhaps the principal reason is because Zinc costs four times more than Wire. For this reason, much Wire is wiped almost clean of its Galvanizing during the surface-smoothing process.

Frost Galvanizing will fight off the rust for 12 or 15 years longer than any other Wire in this country.

Principal Reason

The principal reason why the Frost Fence will save one-third in Posts is just this:

The Coils in the Frost Fence act exactly like a Spring. When severe Canadian weather changes cause the Frost Fence to contract, these Frost Coils "give" their surplus. But nearly all other Fence will snap.

And when expanded, these very same Frost Coils "take in" that surplus. This, instead of letting the Fence sag, lose its shape and become unsightly. And no matter how often contracted or expanded, these Frost Coils always act the same.

THE "BT" LITTER CARRIER

Note the double purchase in lifting and the simplicity in construction.

No machine on the farm is used as many days in the year, or saves as much disagreeable work as a Litter Carrier. A boy can fill, wind up and push out in a "BT" LITTER CARRIER four barrels of manure with ease, no matter how much mud or snow there is in the yard. The manure can then be dumped into a wagon or sleigh, and put directly on the land, with very little if any more labor and time than is required to pile it in the yard with the old method, where the greater part of the fertilizing value of the manure is wasted.

Write for free catalogue showing best method of erecting Litter Carriers, and telling why you should buy a "BT" LITTER CARRIER.

BEATTY BROS., FERGUS, ONT.
We also build Steel Stalls and Stanchions and Hay Carrier Goods.
