

Crops and Live Stock In Ontario.

The following is a summary of the reports made to the Ontario Bureau of Industries by over 500 correspondents under date of May 1st.

The Weather-November and December of 1901 were a little colder than the average. January a little warmer, and February about the average, though five degrees warmer than a year ago. March was nearly ten degrees above the average, and April somewhat warmer than usual The precipitation for the past six months was one and a half inches below the average.

FALL WHEAT-The November bulletin stated that there was a considerable decrease in the area sown to fall wheat, owing to the ravages of the Hessian fly. It is satisfactory, however, to note that the injury to the crop by the fly so far has been much less than was feared. While a year ago complaints of losses by Hessian fly were common in nearly all the countries south of a line drawn from Huron to Wentworth very extensive damage having been done to the growing fall wheat in the counties bordering upon Lake Erie-only a few of the correspondents now reporting speak in a positive manner of actual injury traceable to the fly, and these reports are confined to odd sections of Lambton and the Lake Erie counties. A considerable amount of fall wheat was sown late to avoid the fly and this has not done as well as that got in earlier. Several correspondents remark that having sown in no section have losses been generfall wheat on out stubble it has al. In fact, references to the steady done poorly. The greatest injury to done poorly. The greatest injury to the crop so far appear to have been sustained from severe frosts and cold sustained from severe frosts and cold winds just after the snow left the been sufficient, although straw ground, the exposed fields suffering considerably in some parts. Taking the crop as a whole, however, the prospect is better than was hoped for six months ago. The loss from Hessian fly, wire-worm and other insect pests has so far been comparatively lent aid in carrying cattle and other small. There are some patchy places owing to trying spring weather to local causes, and here and there portions of the crop have been plowed up or resown to barley; but, notwithstanding these drawbacks, there are many fields reported in excellent condition and in a number of sections a large yield per acre is looked for.

WINTER RYE-Although more winter rye is being raised than in recent years, the acreage is still comrecent years, the acreage is still comparatively small. That which was at this time of the year, other feed-given. sown last fall came through the wincondition, nearly every reference to the growing crop being favorable.

CLOVER-Reports concerning clo ver are favorable generally, many of them being enthusia stically so. Here and there accounts come in of heav ing during the winter or spring, but nothing general has been report ed in the way of injury to the crop As correspondents wrote the pros pects for hay were never better, both old and new meadows promising well

SPRING SEEDING- Most of the spring crops were got in somewhat earlier than usual, a number of correspondents reporting seeding as hav ing been practically completed by the 1st of May. In most cases the seed-bed was in excellent condition and the "catch" has been one of the best for years. As correspondents wrote a iderable amount of the spring grain was above ground, and gave promise of a first-class crop should Bishop Spalding. untoward intervene. The sowing of field peas, however, had been delayed in many instances order to escape the "bug."

VEGETATION - Correspondents do not agree regarding the state of asserting that the growth in field and forest was then well advanced, and others that it was about normal, while the majority claimed that the season might be regarded as a rather backward one. In many quarters there was sufficient grass for pasturing sheep, but hardly enough for cattle; but it was considered that only a few warm days were needed to make a luxuriant growth, as the ground contained plently of moisture, and bud and blade eady to respond.

stock have come through the winter in good condition. A few comparatively light forms of distemper among horses are reported in sveral localities, and in the county of Lanark some cases of strangles occurred but the majority of correspondents usual good condition for the time of the year, and spring work has had only a good effect upon them. Their chief drawback appears to have been a rather lighter ration of oats than ordinarily, owing to the scarcity of that grain. Cattle as a rule, are also in excellent form. Some report them as being rather thin, but none dispute their general good health Ringworm appeared among herds in some of the Parry Sound townships, and old cases of lumpy aw occurred elsewhere, but with these exceptions there is a remarkable clean bill of health to be shown for cattle. Sheep have done exceedingly well a large number of lambs having been dropped, which have turned out healthy and vigorous. The dog is inveighed against by several correspondents as being a nuis Swine have also done well as a class. Cases of disease and death amoung young litters have been re ported in several parts of the province, but these appear to have resultthe reports. Fodder generally has been rather scarce, and the high prices prevailing for coarse grains and mill feed tempted many raisers of live stock to feed closer usual. Several correspondents refer to the silo as having been an excelanimals through the winter.

ing like unaninity in the reports re ceived regarding farm supplies. Taking the province as a whole, however, there has been a sufficiency or more of hay, and a scarcity of oats Many correspondents state that there is but little wheat left, although others claim that there is a fair surplus yet on hand. It is safe to say that while there is not as much hay ing stuffs such as ensilage, stover, etc., would enable then to put a fair amount of both hay and wheat on the market should extra high prices prevail. Fat cattle are scarce in nearly every section, the high prices ruling having cleared them out early. Many correspondents also report scarcity of store cattle, although some claim that there are still a considerable number on hand, more especially in the East Midland Northern districts. In some of the western countries buyers from the Canadian Northwest bought up a lot of young stock for finishing off. The high price of grain and other feeding stuffs is also give by some corres pondents as a reason for the paratively small number of fat and I store cattle kept on hand.

FARM SUPPLIES .- There is noth-

Though all I have and striven for be cast aside as having no worth yet am I certain that failure, no less than success, serves God's purpose, if we but have good will.

DRESS .- At the present moment fashion is absorbed more particularly with the little whims, pretty fancies and small yet telling differences in details of dress rather than with any important changes. Therefore, were not for the excessive elaboration and extravagance in dress there would be a blissful satisfaction in the variety spread out before us.

Yet there are no end of pretty things which are not so expensive. and there is a range of styles to suit every purse. It is not the society woman with dozens of elaborate gowns who is most to be envied after all, for the materials are so pretty that the simple gowns can be very attractive.

One distinguishing feature of dress just at present conspicuously in sight is the varying shades of green which are worn. Emerald green is the leading order of color perhaps, but any shade of green seems to answer the purpose if it is rightly used.

Green wings on a dainty white lace hat show one of the pretty fancies, and then there are green sashes with white gowns, green silk slips to wear them, green stitching on both black and white gowns and touches of green wherever green harmonizes LIVE STOCK-All classes of live prettily with the color of the gown, Green predominates in some of the embroideries, too.

Unquestionably it is to be one special note of color in dress through-out the summer. It is of all colors the most suitable for summer wear, speak of horses as being in an un- being restful to the eye and cool in

> WALL PAPER.-The recent unfortunate experience of a Brooklyn housekeeper may serve as a preventive to some one else, says a writer on domestic topics. Her home bought this spring, was repapered from top to bottom before the family took possession. On the walls of the guest room was put a pink paper self-striped in two tones, and it was noticed on every visit of inspection, while the renovation was going on that a peculiar smell came from this room. Comment to the decorator secured only the airy reply that the paste might have stood a little too long, and in any event the would soon go away. With this as surance the move was accomplished, and the room daintily fitted up with its pink draperies and other effects to correspond. A month's residence in the house, however, with the windows of this room open night and day has not lessened the disagreesmell, which is indescribable except that it is suggestive of mustiness and decay. Finally the advice of another decorator has been sought, and he explains that the condition is one that is occasionally met. The smell comes from the paper through some defect in the sizing used. There is a possibility that it may be lessened almost to the point of imperceptibility after months of airing, but removal of the paper is advised as the most satisfactory course. To do this now at the end of weeks of confusion seems impossible to the tired housekeeper, and, as the family leave almost at once for the summer the experiment of shutting the room to the rest of the house, and leaving it open to the air, is to be tried until autumn. Decorators should know when a defect of this sort exists in the paper, and can be held respon-The real annoyance, however is in prolonging the confusion of the home, and it is in hope of possible prevention of this annoyance to some

A WHITE SAUCE that is excellent to serve with hot steamed puddings is made by diss lying in a half a cupful of cold water a tablespoonful of com starch. When blended add a half a curful of powdered sugar, pinch of s It, and a cupful of boiling water. Put on the fire, in a double boiler and boil fif een minutes, stirring constantly. Add the whites of two eggs tearen stiff, a teaspoonful of vanilla, and two tablespoonfuls of Remove from the fire and sherry. beat until cold.

housekeeper that the paragraph is

SCIENCE AND INDUSTRY.

A COMMERCIAL UNIVERSITY .-Mr. Ferdinand Focconi has founded I sent d it to the city of Milan, dowing it with a million francs, (\$200,000). The curriculum will comprise courses in political economy, nance, state accounts, statistics, the history of commerce, commercial, geography, constitutional, commercial and private law, international and industrial law, banking, as well as special courses not yet fixed upon. "ITTLE WILLES establishment of so limited an endature, and a benefit beyond caldownert. Its object "is a scientific tion to the Church in America.

preparation for commercial The scheme of study is interesting and suggests a programme for the professorships of commerce founded in several American univer

THE COAL INDUSTRY.-In 1900 output of coal throughout the world was about 757,000,000 tons. Of this amount 616,000,000 were furnished by three countries, viz. :- United States, 240,695,917; Great Britain, 225,181,300; Germany, 149,551,000 (metric tons).

Then follows in order. Austria-Hungary, France, Belgium, Russia, which produced, taken together, 111,-000,000 tons. Canada furnished 4. 760,197 tons. The increase 1883 has been enormous, viz., 80 per cent. Great Britain about 1850 nished about 56,000,000 tons: about 1870, nearly 125,000,000 tons; about 1890, nearly 182,000,000 tons and in 1900, about 225,000,000 tons. The question arises, how long the world's supply is to last in the face of such expenditure

EXPECTED COMETS. - Two periodic comets are expected to return luring the present year. The first was originally discovered by Temple at Marseilles in 1869, and revolves about the sun every five and a half years. It was independently discovered by Swift in California in 1880 and was again found by Barnard at the Lick Observatory in 1891, It was not seen in 1886 and in 1897, nor between 1869 and 1880. It is expected to return early in December, 1902. The second comet was discovered by Swift in California in 1895 and its period is about seven years It is not improbably identical with the comet discovered by Messier at Marseilles in 1770. It was expected to return in 1775, but in passing close to Jupiter its orbit was great ly altered. It will return toward the end of November, 1902.

BUTTER OF AUSTRALIA .- Australia has become an important exporter of butter and other dairy products. The Province of Victoria alone exported to Great Britain in 1889-1900, 17,000 tons of butter, representing a value of \$8,000,000. The butter export of Victoria was 369 tons in 1889 and 759 tons in 1890. For the last ten years the export has been not less than 80,000 tons

A SILVER JUBILEE. -Commenting upon the recently celebrated twenty-fifth anniversary of the consecration of the Right Rev. Bishop Spalding, of Peoria, the "Ave Ma ria" says :-

"The influence of his voice and per has been so beneficent and far-reaching, he is so widely known and so highly esteemed, it was but natural that his Silver Jubilee should be re garded as an event of unusual interest and observed with more than or dinary enthusiasm. It drew together from all parts of the United States a large number of eminent priests and prelates, all eager to of fer their congratulations and good wishes; and from distant lands came greetings no less cordial, and felicitations no less sincere.'

And, after speaking of the deep affection in which Bishop Spalding is held by the people of his own dioour contemporary adds the followina very just remark:-

"By his books the Bishop has multiplied himself, and in innumerable places outside of the city and dioese of Peoria they take his personal place, enunciating the highest truths, teaching the most needful lessons, in spiring the noblest enthusiasm. Let us hope that an influence so great and so ennobling may be exerted for many years to come."

While we most heartily join in the fervent wish expressed by the "Ave Maria" we may add that no organ, on this continent, has published more of Bishop Spalding's delightfully instructive writings than has the "Ave Maria." But we, in common with all Catholics in the English-speaking world, feel and owe a debt of gratitude to the grand prelate whose rich mind has been stored with treasures of knowledge and who has never stinted 'the world in the enjoyment of all he could bestow. The Catholic Church has produced so many great and learned, pious and zealous bishops that it would be an impossibility to form an estimate of all they have done, and are doing, in every sphere for the advancement of himmanity and the glory o. God. can single them out from each other that has particular reference to an individual member of that hierarchy. To-day it is Bishop Spalding's turn, and we trust and pray that he may live, in strength and nealth, to celebrate his golden jubilee of consecration, for such would not only reward, in his life, for so much virtue and good accomplished; but it would be still more a blessing to hu-'University' is a large name for an manity, a boon to our Catholic literature, and a benefit beyond calcula
