Mr. Gopher gets no warning when the grain is poisoned with

GOPHERCIDE

ONE big trouble with ordinary strychnine is that its intensely bitter taste gives it away. The gopher "gets wise" before he has swallowed enough to kill him.

Gophercide is a preparation of strychnine without this bitter taste. Gophers actually like grain poisoned with it—eat it greedily—and trouble you no more.

Perhaps you know how hard it is to dissolve ordinary strychnine and get enough soaked into the grain to be deadly. Gophercide is just the opposite. It dissolves freely in warm or even cold water, making a strong solution which poisons every grain through and through. Rains won't wash it off, for it goes right into the grain, and though the gopher may not get it for days, it gets him—quick.

Mr. W. E. Wright, of Vanscoy, Sask., says this about it:—"Gophercide" has given me complete satisfaction. It is easy to prepare, and is a sure killer. I used it on land that was full of gophers, and it certainly did its work well."

A 50c package of Gophercide, dissolved in half a gallon of water, poisons a gallon of wheat—and that's enough to kill 350 to 400 gophers—7 for a cent. Get a package from your druggist, and start after the gophers early.
