The firing secame Heavy. The Boers, holding a splendid position, covered the left of the Highland Brigade, which advanced partly up the river bed and partly in the open, while the rest of the brigade, with

river bed and partly in the open, while the rest of the brigade, with the other regiments, swung round the front of the Highland Brigade on the level, coverless ground, exposed to a terrible fire, which obliged the men to lie upon the ground, as they did for the remainder of the day. This began at 7.30 in the morning. Through the dreadful heat and terrible thunderstorm our men hung to the position, answering the Boer fire and shouting steasily.

In the meantime the rest of the infantry completed the enveloping move fantry completed the enveloping movement, the Welsh regiment having succeeded in scizing the drift, thus closing in the Boers, who fought throughout with splendid courage. Gen. Cronje's laager, full of carts, ammunition and stores, could be plainly seen near the north bank.

The Canadians Brought in.

Gen. Smith-Dorrien collected a large body of men, including the Canadians, and crowd the river by Paardeberg Drift, advancing toward the laager, which was being vigorously shelled. This force made a gallant attempt to charge into the laager, but failed. Before seizing the western drifts, the Boers occupied a kopje on the south bank, running down the river. Therefore their force is cut in two. The Boers hold the kopje, and have one Vickers-Maxim and probably one or two other guns.

other guns. Committee, also City Solicitor Guthrie, and as a result of their opinions be represented this city at the conference in Toronto, and was pleased to say that a number of the reforms, as proposed by several of our all ermen in regard to the Aldernanic Bylaw, were discussed and action taken so as these proposed amendments would be properly dealt with by the Legislature when i, came before them.

The matter of a deputation to further work in the matter was discussed at length after which the following mation was

Situation Is All Righte

London, Feb. 23. — (1.30 a.m.)—
The War Office has issued the following from Lord Roberts:
"Paardeberg, Feb. 22. — Methuen reports from Kimberley that supplies of food and forage are being pushed on as fast as possible. There will be enough coal to start the DeBeers mines in 10 days. By this means great misery will be alleviated. Hospital arrangements there reported perfect. He hopes Prieska and the adjoining country will soon be settled."

Opened Oct. 1st. Beautifully Located. Possesses the Finest Treatment Rooms in America.

THE T. WILLARD READY HOT AIR TREATMENT OF RHEUMATISM.

By DR. BURNS, Chicago. The treatment of Rheumatism, particularly of the chronic form, is often far from satisfactory, either to the patient of the physican and up to the present time has left much to be desired. Even in the most favorable cases, when the worst of the disease is past there often remains a tenderness and a stiffuess about the articulations which are a incovenience to the patient, if not a source of positive discomfort. The Dry Hot Air Treatment by the T Willard Ready method, above 500 degrees F, applied to the affected part, in cases of long standing Auchylosis, not only produces speedy relief, but produces absolute cure

The knite, with its butchery shall no longer reign,
But water, as first made by God, Man shall know,
When heated with flame, as pure as his name.
Shall disease dissolve, as the sun dissolves snow.
T. WHLARD READY

fact affected parts brought to as normal a stage as possible.

6—Certain pothoganic germs necessarily would be annihilated if subjected to such high temperature, therefore the subjection of a tubercular joint or pyemic effection genorrheal arthritis must be followed by good results.

The therapeutic properties of intense dry heat are Antephlogistic (local), and Solvent (local), Anesthetic (local), and Antiseptic.

In summing up these tnerapeutic effects of dry hot air (intense and isolated), the reader should bear in mind that they are not merely theoretical deductions, but have been substantiated in actual chemical experience, and observation in many patients.

The question now is in which cases is

patients.

The question now is in which cases is the treatment suitable. We could answer this in a general way, but believe in so far as the treatment is a comparatively new addition to therapeutics, to mention each

ermic, showing dilation of the capillaries—hence

Muscular Rheumatism ets h n in a n acute attack or begin in a sub-acute in a sub-acute and rot the good with a sub-acute and othronic and in an acute ferm.

4.—Acute Gout differs from acute artic. ular rheumatism in so far that with similar symptoms the small joints are affected and the urtic acid deposits are formed in the affected parts. It has been the experience of those physicians who have subjected the affected small joints of the toes and fingers to Dry Hot Air that an alleviation of these symptoms in from there to seven days. to Dry Hot Air that an alleviation of these symptoms in from three to seven days, if while with general treatment alone it lasts from ten to fifteen days. Recognizing the pathology of acute gout we can readily see that the inflammation will be subdued and the deposits of urate sold absorbed.

5.—Chronic Gout. Following several acute attacks and characterized by urate of sods deposits in the joints of the hands and feet practically deforming them, can hardly be cured by any other method than the Dry Hot Air Treatment applied twice daily at intense temperature.

6.—Sciatica is either primary or see ondary, that is to say the great nerve itself is inflamed or secondary, that is to say due to make the secondary that is to say due to my disease. It is evident that in sec-

onders sejame the distribute cause

be necessary to prove its rationale.

The of an ine Aircumant crews was be mentioned.

1—Acute Articular Rheumatism. Whether this disease is due to an infection by germ, to cold or exposure, or to an abnormal condition of the blood or system is not yet definitely decided upon, and makes little difference, as the T. Willard Ready Dry Hot Air Treatment is concerned. That much is fact that besides general symptoms, such as fever for instance, one or more of the joints becomes quite red, swollen, painful and sensitive to touch or motion.

Pathology teaches us that the Synoveal membranes of the joints become inflammed, and exude a turbid thin the first properties. The properties of the mentical profession. They have used electricity, they have blistered along the course of the properties of the great sciatic nerve, the intense heat if applied for an hour and a half daily, would not only penetrate the muscles and tissue overing the sciatic nerve, but reduce the majorgement and inflammation of the nerve substance itself and thus easily ours estation articularly when all injections, liniments, massage, electricity either fail totally, or give at best but little and temporary relief, swollen, painful and sensitive to touch or motion.

9.—Traumatic Synovitis. or

9.—Traumatic Synovitis. or

10—Tubercular Synovitis. It is hardly necessary to repeat what we have already said in regard to the Dry Hot Air Treatment as regards these affections. Only that much we wish to add, that where heretofore tubercular joint troubles (synovitis or arthritis) were treated by intra-articular injection of certain antiseptics, the results, besides the pain, which such treatment necessarily caused, were far from satisfactory, while now the inflammatory process is quickly checked and the bacilit absolutely destroyed; for any tyro in medicines knows that even low temperatures of heat are sufficient to kill the bacilius tuberculosis. The value of dry hot air treatment is perhaps best established in sprains (traumatic synovitis), as it has been frequently reported that patients who could not take a step on account of the pain have gone home after an hours treatment.

successfully treated with dry hot air, if due to rheumatism gononorrheal infection, tuberculosis or trauman, unless there is such extensive destruction of tissue as to make reparation impossible or if the bones forming the joints are grown together. In such cases relief can be expected from osteoplastic operation only. In so-called fibrous anklosis, the dry hot air treatment will be found an excellent adjunct to foreible breaking of the adhesions, prior to and immediately after the operation, when the pains incident to the breaking will be relieved at once and a lighting up of a dormant inflammation prevented.
