P.O. Box 5800
Barrie, ON
L4M 6K3

Phone: 705-728-5657
Fax: 705-739-5971

Export Contact: Mr. Fred Mink, Sales Manager

Marketing Profile

Air compressors have found a wide variety of uses in supporting the automotive market operating various tools and equipment as well as supporting spray painting equipment in automotive finishing operations. DeVilbiss has been manufacturing heavy air duty compressors for over 80 years and has achieved a reputation for reliability and service in the automotive after market, industry and pneumatic control markets.

Their products consist of air cooled reciprocating air compressors ranging from 1/4 hp to 40 hp operating at pressures up to 350 psi. They incorporate many unique design features that have made them the number one choice for the automotive after market. These include low pressure, oil-pickup ring lubrication, individually tested and easily serviceable valve assemblies made of corrosion resistant brass alloy, and honing and piston ring technology that ensures the lowest possible oil carryover for excellent air quality.

They are currently supplying compressor pumps and outfits to the United States and France.
