Management

Company/Product

Crippen Consultants is a Canadian consulting firm established in 1954 to provide engineering services to the water resources sector with a major focus on hydroelectric power development and flood control. Over the years, the firm has developed into a multi-disciplinary consulting practice and expanded abroad. Crippen has become increasingly involved in project management, construction services, industrial development, design of groundwater development, surface water storage, irrigation and drainage, water supply and sanitation, environmental engineering, ports, airports, highways, bridges, and rapid transit.

Crippen operates as a wholly-owned division of H.A. Simons Ltd., such that although the division employs only 100 people, it brings to projects the resources of over 2,000 skilled professionals from the parent company.

Crippen is an innovator in the application of CADD and geographical information systems (GIS) to engineering and environmental problems. Crippen is recognized internationally for its projects in water resources, transportation, and industrial development. Crippen prepares master plans for environmental rehabilitation, domestic policy development, and infrastructure design projects. The firm has international experience in community development, enhancing the role of Women in Development (WID), technology transfer, and institutional development.

Crippen promotes preparedness for environmental mishaps through effective planning, design, and monitoring. Crippen also responds quickly when an environmental emergency arises and assists clients with the design of remedial measures.

Current Geographic Marketing Activities

Crippen is engaged in projects in Canada, the USA, Central and South America, Central Europe, Africa, and Asia and is actively pursuing further assignments in these geographical markets.

Contact Sought

Crippen would like additional contact with senior staff or organizations which develop infrastructure, such as dam owners, irrigation authorities, and electric, water, and sewerage utilities. Crippen also seeks contact with the senior staff of any industry who would like to take steps to reduce their risk of environmental damage in the event of an industrial accident.
