JANUARY.—I was once led to believe that pumpkin-seeds were good for feeding milch cows, and commenced to feed them out to a cow at the rate of half a bushel per day. At that time she was giving eight quarts of milk per day, but instead of this increasing the quantity, it diminished it. I increased the feed to a bushel a day, still there was a decrease in the quantity of milk, until the pumpkins froze up, when she did not give but four quarts per day. The cow did not fatten. I then took out all the seeds, when lo, the change! Instead of five quarts of milk a day I got nearly nine in a day.
