

## Double Your Dairying Profits Without Buying A Cow

**SUPPOSE** somebody offered to swap a ribbon, prize-winning milker for any cow in your dairy-herd, — without a cent to boot? Wouldn't you jump at the chance?

I will do as well as that for you. I will show you how to get as much real money out of an ordinary herd of dairy cows as you'd get by your present methods out of a herd of prize-milkers. I will prove to you there's twice the money in dairy-farming you've been getting, — and you needn't spend any money to get the difference. I will do this just as soon as you write me and say: "I keep so many cows. I get such-and-such a price for my milk — or cream — or butter" (whichever end of the dairy business you follow).

I am not setting any traps for your dollars or your brains. The more skeptical you are, the harder I'll convince you. The best friends I've got among my customers are the men who didn't believe any cream separator amounted to much.

They found out different after they got a Capital Separator and put it to work getting back the money they'd been feeding the pigs and vealing the calves. They found out that the Capital Separator adds over thirty dollars a year to the actual net earnings of every cow they keep. So will you find that out, if you'll write to me and ask for the plain truth about this whole separator idea.

Thirty dollars a year more profits out of every cow you keep for profit's sake, — whether you keep four cows or forty! That is what I promise you. That is what the Capital Separator will get for you — and it is the only thing that will get it. Yes, indeed, I CAN prove it, right up to the handle. Ask me and see.

And I will not only show you why and where and how the Capital gets that extra profit for you, but — I will show you in plain words how you can make that profit with a fraction of the work you have to do to-day to get half as much. That is where my plan for SELLING butter and cream comes in, — my plan specially devised for your special case and your special locality, and

which you can work yourself without sharing the profits with anybody.

Maybe you don't need the plan; but I know you do need the separator, and I can prove to you why and where and how you need it, and what it will pay you if you get it.

Half the work you have to do now to make any money out of dairy-farming, — that's another thing the Capital Separator means to you. Half the work, every day in the week; and thirty dollars more a year from every cow.

Half the work, — much less than half the work, maybe, but half at least, — simply because the Capital Separator is the machine that runs with the least elbow-grease and makes by far the least work for everybody who has anything to do with the dairy side of your farm. That's due to three things: the Capital bowl, the Capital gears and the Capital really-low-down whole-milk tank.

The Capital bowl gets all the cream possible out of the milk because it is the bowl that weighs least of any and sends the milk through a wing-cylinder that simply can't let any cream stay in the skim milk. The Capital bowl is as easy to clean as a lamp-chimney — doesn't take five minutes to cleanse it perfectly.

The Capital gears run so easily that a ten-year-old boy can handle the milk of eight cows in twenty minutes, and not be out of breath when the run is over. The mechanism is so perfectly balanced, so nearly automatic, that the whole work of perfect cream separating, twice a day, won't use up as much energy as it takes to carry a bucket of water fifty yards.

The Capital whole-milk tank is the only really low-down tank there is — because it's just as low-down as a tank can be put, — it stands on the floor! That one thing does away with more waste effort, banishes more bother, abolishes more muss and slop, than you'll ever think possible until you've seen and used the Capital.

But all these things, and many more, are things you ought to know about in detail. I can't tell you about them here, — no room to. But if you will simply write to me and ask for the facts, I will show you why the Capital Separator is the one thing your farm needs right NOW, — and I will show you that you CAN afford to get it right now. Doesn't matter if money's a little tight with you, — I can fix it so the Capital will buy itself before you have to pay a cent for it. Write to me and hear the whole story, — it's worth while.

### GOSSIP.

Eighty farm horses and mares, suitable for general purposes, are advertised for sale in this paper at very moderate prices, also drivers, wagons and harness, by M. A. Pigott & Co., Goderich, Ont.

There is, says the American Horse-breeder, considerable speculation as to whether or not Sweet Marie, 2.02, will lower her record this year. The chances are in her favor, provided she is perfectly sound, and is in as good condition as reported. It should be borne in mind that she was never started in a public race for money until the season of 1908, and she was then seven years old. She trotted only ten heats in five races that season, and made a record of 2.13½, which was a very light campaign for a trotter of her age and blood inheritance. Last season she trotted 20 heats in public, 16 against other horses and four against time. She lost one heat to Wentworth, and also lost three of the heats in which she started against time. She lowered her record to 2.02 against time at Columbus, O., September 22nd. Her losing heats against time were trotted in 2.04½, 2.03½, and 2.02½. During the four seasons that she has been campaigned, Sweet Marie has trotted only 90 heats in all. She is now but eleven years old, which is six years younger than was Goldsmith Maid when she lowered the world's champion trotting record to 2.14.

### TRADE TOPICS.

**A FREE VETERINARY BOOK.** — A useful little book, of which our readers have seen previous mention in these columns, is the Zenoleum Veterinary Adviser. Zenoleum animal dip and disinfectant has earned a wide measure of popularity, and is endorsed by the authorities of forty-two agricultural colleges and experiment stations. The Zenoleum Veterinary Adviser gives in their own words what the professors and directors connected with these institutions have said of Zenoleum, and the suggestions they offer for its use. In addition, its sixty-four pages contain, in compact form, many descriptions of diseases and ailments, with their causes and symptoms. The book may be had, free, by any reader of this paper who will write the Zenner Disinfectant Co., 113 Lafayette Ave., Windsor, Ont., mentioning "The Farmer's Advocate."

**SINKING DEEP WELLS.** — The Spudding Attachment on the Crown Well-drilling Machine, advertised in this paper by the Crown Drilling Machine Co., of Akron, Ohio, is claimed to be most perfect in operation. There is no backslashing of the rope against the mast, while it is substantial enough to swing up the regular string of tools. Mr. Wm. Baugher, of Danville, writing of this drill, says that at 145 feet he was not obliged to use the walking beam, as the Spudding Attachment was working perfectly at that depth. This is but one of the many superior points in the Crown drilling machine, which gives the maximum of results with the minimum expenditure of labor and fuel. It works with perfect ease and satisfaction in all formations. Well-drillers will find it to their advantage to write the Crown Drilling Machine Company, Akron, Ohio, for catalogue and particulars.

**A HORSE-POWER POTATO DIGGER.** — In these times of scarcity of farm help, the question of securing labor-saving implements interests the farmer. The Hallock Potato Digger, advertised in this paper by Mr. H. Broughton, of Sarnia, Ont., seems to fill the bill for lifting and screening the tubers. Mr. Broughton, who is a farmer and makes potato-growing a specialty, in which he has had 35 years' experience, which induced him to look for a good two-horse digger that would do the work successfully, writes: "After attending fairs at London, Toronto and Detroit, I did not see anything to suit until last year, when I came across the Hallock machine, and having dug about 20 acres with it, I was so well pleased with its work that I thought it would be a good thing for the potato-growers of Canada to know that there was such a labor-saving machine in the market. I finally decided to take the agency and let it be known for the benefit of others as well as myself."

**HAYES' PATENT**
