Human Churn

WHEN the food reaches the stomach it is subjected to a peculiar churning movement by the muscular walls of the stomach. (See Dr. Pierce's Medical Adviser, page 45). In the liver, kidneys and skin, the blood is purified of its waste materials—these organs act as human filters, leaving the blood pure and clear—unless liver, digestive tract and kidneys are clogged.

Dr. Pierce's Golden Medical Discovery

is a stomach, liver and kidney tonic—by assisting the stomach to assimilate, the liver to filter, the kidneys to act—the poisons are removed, the red blood corpuscles are increased and one feels light, fresh and active instead of lousy, dull and heavy. The "Discovery" stimulates the stomach, increases action of heart and arteries and is a most satisfactory alternative in blood-taint of any character. The refreshing influence of this extract of native medicinal plants has been favorably known for over forty years. Everywhere some neighbor can tell you of the good it has done.

Sold by all medicine dealers in liquid or tablet form; or send 50 one-cent stamps to Dr. Pierce, Buffalo, N. Y., and a trial box will be mailed you.

LIVE STOCK HUSBANDRY

URTICARIA IN HORSES.

Causes and Treatment of This Disorder of the Digestive Tract.

Urticaria is a frequent form of skin disease in the horse, and is manifested by the sudden appearance of irregular lumps, roundish or oblong in shape, and varying in size, says the American Cultivator. Some are like hemp seed, others as large as beans and flattened upon their surface, accompanied by heat and intolerable itching, but not always affecting the general health. The animals most subject to it are fat, coarse, overfed ones, and they are

The Belgian horse, according to the admirers of this breed of drafters, surpasses all others in uniformity of type. Probably no draft breed has made such progress as has the Belgian in the past twenty-five years. Rigid selection, good feeding and general care have been the dominant factors in bringing this about. The horse pictured is a pure bred Belgian stallion and a prize winner in France.

generally attacked in hot weather. Sometimes it assumes a general form, in which case it constitutes what is known as true "suffert." Sometimes the swellings are confined to particular parts, in others diffused over the body, and may in unhealthy animals terminate in abscess, attended with more or less fever.

The trouble is caused by some disorder of the digestive apparatus and is sometimes preceded by colic and diarrhea. A sudden change of diet will frequently produce it, and it is not uncommon when horses are first turned out to grass. It is supposed that poisonous herbs, a draft of cold water when the animal is heated, sudden exposure to cold and damp and stones or worms in the intestines are also causes of it. It is probably due to the detention in the system of deleterious matters, which ought to be got rid of.

Give a mild dose of physic and one ounce of bicarbonate of soda twice a day in the food for a few days. Keep the horse on light laxative food, and give a linseed mash every night. The bicarbonate of soda has a most soothing effect on the mucous membrane of the intestines, while the good effect of the linseed in the cases of irritation of the skin or mucous membrane is well marked. In obstinate cases tartar emetic or liquor arsenicallis may be used, the former in doses of a dram and a half in the corn or mash once a day for a week or ten days, the latter in doses of one ounce a day in the water or as a drench for a similar period. Should there be much itching—the animal rubbing itself—the skin must be bathed with warm water and dressed with the following lead ointment: Solution of diacetate of lead, two drams; rectified spirit, four drams; distilled water, one pint; mix.

SHEEP ON THE RANGE.

Bedding Out System More Profitable Than Close Herding.

As a result of experiments during the past few years the department of agriculture is now advocating the use of the bedding out system of herding sheep on open ranges instead of the old close herding system which has heretofore been in use.

This system gets its name from the fact that the herder who attends the band camps and beds his flocks wherever the sheep find themselves at nightfall. Under the old plan he established a fixed camp and bed ground and drove the sheep back to the same place each night.

From experience on the national forest ranges last year the department states that lambs from bedded out bands were five pounds heavier on an average at the end of the season than those which were trailed to and from established bed grounds and that the range can carry from 10 to 25 per cent more sheep than when so much is trampled out in traveling back and forth. The disadvantages of the old system, according to the department, were twofold, those to the forage and those

to the sheep. The forage suffered by being trampled badly and being actually destroyed at and near the bed grounds; the sheep lost weight in going to and from the camps, and in dry weather suffered not a little from dust and from crowding.

Foundered Horse.

Let the horse run barefoot on low pasture and twice a month blister the hoof head (after removing the hair) with a mixture of one part of powdered cantharides and three parts of lard. Tie the horse up short when the blister is acting. Wash the blister off in two days; then apply a little lard daily.

ROLL AFTER HARROWING.

Do not use a heavy roller to settle the land and then leave the land untouched after rolling, as this will hasten the rapidity in evaporation of soil moisture. Water rises to the surface by capillary attraction, and the closer the particles of soil are together the higher it will go. This is plainly and frequently seen as one walks over a field and notices where the horse has placed his foot and settled the soil particles. The ground is usually moist on the surface unless covered again with a loose mulch. The same principle applies again in the case of the roller. Therefore follow the roller if needed in preparing the seed bed with the smoothing harrow and keep a mulch on the surface to prevent a loss of water. Also follow the plow with the harrow immediately for the same purpose. In July and August this moisture will be needed.—American Cultivator.

FIRE BLIGHT RAVAGES.

Wisconsin Orchards Are Suffering From an Epidemic.

One of the worst epidemics of fire blight that ever visited Wisconsin is gaining headway throughout many sections of the state this season, according to J. G. Moore, horticulturist at the University of Wisconsin College of Agriculture.

The presence of the disease is first indicated by the dying back of the leaves, which turn reddish or dark brown, while the bark is shrunken and shriveled. In many cases if the bark at the lowest portion of the infected area is peeled off the disease will be found extending internally far below the point where its presence is made known at the surface. In this manner it makes rapid but insidious headway before the true extent of its damage is realized.

Different varieties of apples vary in their susceptibility to fire blight. In Wisconsin the Yellow Transparent, Wealthy, Tetofsky and Transcendent Crab are most seriously affected.

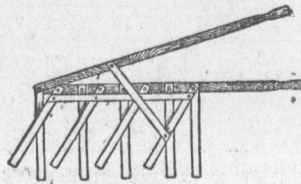

The disease is caused by bacteria which gain entrance to the plant tissues through the flowers or by means of wounds on the surface, particularly those made by insects. The method of the development of the disease is such that spraying cannot control it. The only way of fighting the trouble is the removal of infected parts.

These are usually removed once or twice during the season—once in summer and again in the fall before the leaves are frosted. Mr. Moore states that it is not advisable to leave the infected parts on the trees until the annual spring pruning, as it is then difficult to detect all infected twigs. In cutting out the blight it is advisable to go at least four to six inches below any signs of the disease and burn all parts removed.

Blight canker or fire blight starting in small twigs and buds, causing the death of tissues at the base of such points, may be removed with the pruning knife. In removing dead tissues it is well to dip the pruning knife in strong formalin or corrosive sublimate solution in order not to spread the disease to other trees. Wounds caused by cutting out blight canker may be disinfected with formalin and the surface painted with white lead.

A Hedge Trimmer.

Hedge cutting or trimming with a sickle or with hand snips is very slow and tedious work. Here is a trimmer

TRIMMER WITH SEVERAL KNIVES.

with several sets of blades similar to a regular trimmer. The blades are attached to a wood handle and operated with a wood lever, as shown in the sketch. The operation is the same as when using the regular hedge trimmer.—Popular Mechanics.

NO ALUM MAGIC READ LABEL BAKING POWDER

FARM FOR SALE

WEST HALF OF LOT 3, CON. 4, S. E. R., Warwick, 100 acres, all under cultivation. On the premises are a good frame house, frame barn with stable and granary, all new. Well fenced and tile drained. Two acres orchard, very best of loamy farm land, well watered by creek running through it. Situated in one of the best localities in the township for cultivation or grazing purposes. For further particulars apply to J. P. ELLIOT, Watford, July 29th, 1914.

PASTURE FARM FOR ALE

FOR SALE, 100 acres pasture land, about one-quarter bush, being part of lot 8, con. 1, S. E. R., Warwick. For particulars apply to H. FENNER, R. R. No. 2, Watford, Sept. 11th, 1914.

CHOICE VILLAGE PROPERTY FOR SALE

COMFORTABLE FRAME DWELLING house containing 9 rooms and good woodshed, situated on two lots, corner St. Clair and McGregor streets, Watford. In good state of repair. Hard and soft water and a number of good fruit trees on the premises. Everything in good condition. Apply on the premises to MRS. KERFOOT or to Box 52, Watford. This property will be sold at a bargain.

CHANTRY FARM

Shorthorn Cattle and Lincoln Sheep

Present offering—1 good, dark red bull calf, also sheep of both sexes, a grand lot of lambs, also a few yearling rams and ewes. See a few samples at the local fairs.

ED. de GEX - KERWOOD, ONT.

Veterinary Surgeon.

J. MCGILLICUDDY
Veterinary Surgeon,

HONOR GRADUATE ONTARIO VETERINARY College, Dentistry a Specialty. All diseases of domestic animals treated on scientific principles. Office—One door south of the Guide-Advocate office. Residence—Main Street, one door north of Dr. Brandon's office.

CIVIL ENGINEER.

W. M. MANIGULT,
ONTARIO LAND SURVEYOR
AND CIVIL ENGINEER,
Box 500, STRATHROY, ONTARIO

Auctioneer

T. DODDS & SON

"For God's Sake, Let Me Stay!"

He pleaded with all the intensity his weakened body and soul could master. His voice trembled. Tears lurked in his strained, anxious eyes. "I have traveled for two days on the train," he said. "I have been turned out of my boarding house. I have been turned out of a hotel in my own town. The local hospital refused me admission. Nobody wants me. For God's sake, doctor, let me stay."

This man had been a railway conductor. He had money to pay for his needs; so he applied to the Muskoka Cottage Sanatorium for treatment of the disease which held his life in its grip—consumption. But those sufferers without money and without friends, what of them? With their hopeless knowledge that people shun them, they believe it futile to seek relief. If their lives are to be spared they must be sought out and supplied with nourishment, medicine, and treatment. To do this costs money. Will you contribute a trifle to help in this effort to save lives? Please act quickly. Winter has brought keen suffering.

Contributions to the Muskoka Free Hospital for Consumptives will be gratefully acknowledged by W. J. Gage, Chairman Executive Committee, 84 Spadina Avenue, or R. Dunbar, Secretary - Treasurer, 347 King Street West, Toronto.

While Mayor Bauer, of Lafayette, Ind., was attending a convention in another city, Mrs. Elizabeth Yonkers assumed the duties of mayor and was in full charge of all departments of the city government.

Miller's Worm Pills are sweet and palatable to children, who show no hesitancy in taking them. They will certainly bring all worm troubles to an end. They are a strengthening and stimulating medicine, correcting the disorders of digestion that the worms cause and imparting a healthy tone to the system most beneficial to development.

SOME HORSE SENSE.

Don't neglect to commence feeding the colts some grain before they are weaned.

The mare should be fed at all times with a liberal ration of clean and nourishing feeds and should have an abundance of pure water.

Raise the type of colt that sells best in your community. Select the sire and dam that will bring this type of colt.

Keeping the colt's feet level and balanced makes all the difference in the soundness and strength of the legs. Watch them!

There is no trouble about working the brood mare on the farm if she is the right kind of a mare and is handled by the right sort of man.

Whenever a horse is pushed out of his natural gait he works at a disadvantage to himself.

A horse that leads well is a pleasure. Begin on the colt and train him to step right up.

A good pair of draft mares will perform more work on a farm than a light team and at the same time grow a pair of good colts.

An Always Ready Pill.—To those of regular habit medicine is of little concern, but the great majority of men are not of regular habit. The worry and care of business prevent it, and out of the irregularity of life comes dyspepsia, indigestion, liver and kidney troubles as a protest. The run-down system demands a corrective and there is none better than Parmelee's Vegetable Pills. They are simple in their composition and can be taken by the most delicately constituted.
