

Principles of Economics

By F. W. TAUSSIG, Henry Lee Professor of Economics in Harvard University.

Cloth, 8vo, 2 volumes, \$4.00 net per set.

This book, which is addressed neither to specialists nor to children, but to students and the educated public, states simply but fully the main principles of economics and their application. It does not avoid difficult or severe reasoning, but centers attention on the larger problems and the important trains of reasoning and treats these liberally and fully. The book deals with the present day; there is very little of economic history, very little about the phenomena of semi-civilization or barbarian society. The experiences and problems of countries of advanced civilization are primarily kept in view. American problems naturally receive considerable attention, but the author is chiefly concerned with those principles which are of general application in all of the leading countries of modern times.

"The book is a notable addition to the literature of political economy. The ease born of thorough familiarity with every part of the subject, and of long practice in successful teaching of mature students, is apparent in style throughout."—*New York Evening Post*.

Monopolies and Trusts

By RICHARD T. ELY.

Cloth, 12mo, \$1.25 net, postpaid \$1.37

In this work the *man who wants to know* may find in condensed form, the causes of trusts, the laws establishing their prices, their limits, and their efforts to control production. The evils of monopoly are plainly stated and remedies are proposed. This book should be a help to every man in active business life.
