

JANUARY.

The snow which fell during the later days of December will, with a fall which will take place on the 31, make the roads good for travelling with sleighs. After that period a succession of very mild cloudy days will occur which will last until the 8th, when the frost will become intense, with clear bright skies, the glass varying from 15 below to 7 and 12 above zero; after the 16th the weather will become more moderate. A heavy fall of snow will commence at 10 minutes before 10 o'clock on the 19th, which will last until the same hour next day. Every three days a change from severe cold to a more moderate temperature, interspersed with slight showers of snow, will be the characterizing features of the last part of January.
