TURN THE RASCALS OUT.

We refer to such rascals as dyspepsia, bad blood, biliousness, constipation, sick headache, etc., inflicting misery upon the human system. Turn them out and keep them out by using Burdock Blood Bitters, the natural food to disease, which invigorates, tones and strengthens the entire system.

HUSBAND—HAVE YOU DECIDED

what kind of a dress you are going to get? Wife—Not yet. I am waiting until our new servant girl unpacks her trunks.

WEDDY MANURE.

We have read articles on horticulture in which the writer complains of manure having weed seeds, and advocating chemical fertilizers because they have no weed seeds. Such a man is merely a would-be amateur; he is too lazy or too much in a hurry to make his compost before he uses it. No stable manure is fit to use under a year if made in the usual slip shoe style. There is but one way to prefer a smooth thorough manure for garden purposes. It must be piled up (usually) in heaps any length, four feet wide, two feet high, kept slightly moist and turned over, the outside turned in, and so worked over three or four times every season. If this is done in a thorough manner every seed will rot, and the manure will be clean, and clean food will make clean land. It would be just as sensible to feed gravel stones to a baby as weedy manure to a garden. In point of fact, until the weed seeds, the straw, the hanks, balls, and all the trash in a manure heap, so called, is rotted down to humus, it is not really manure at all.

TOAD AND CENTIPEDE.

The courteous yard there are quite a number of large, sleek-looking toads. One of these toads was seen by the owners about the place, says the El Paso Herald, engaged in an earnest attempt to swallow something that seemed to tax all his energies. A closer examination revealed the fact that the toad had seized a centipede by the rear end and was slowly and placidly stowing him away within his jaws, in spite of the victim's frantic efforts to escape. Nearly one-half of the reptile had disappeared, when the centipede, with the unremembered balance of his one hundred feet, succeeded in getting a ground hold, and with a desperate effort freed himself from the jaws of the devourer, and was moving rapidly away when the toad, finally realizing the situation, made a jump and again caught his victim. This time the centipede seemed to realize the hopelessness of his situation and frantically turned to the right and left, each time nipping his enemy severely upon the lips and head, but to no purpose. The toad would coolly brush away these attacks first with one foot and then with the other, all the time taking the centipede in until at last nothing remained but the toad, calmly and serenely seated upon his haunches considering the next move.

FARM AND FIRESIDE.

HOUSEHOLD HINTS.

Such as Young Housewives May Well Make a Note of.

Green tea will revive rusty black lace and render it as good as new. Wash hair brushes in soda-water and immerse in soap. Put in the air to dry. Soap may be kept fresh for a long time in a jar of water, changing the water every morning. While baking do not open your oven doors on a crack, as fanning in cold air makes the cake fall. To remove discolorations upon dishes put into a solution of soda-water and rag dipped in whitening. Onions, turnips and carrots should be cut across the fiber, as it makes them more tender when cooked. Turnished gold embroidery may be cleaned with a brush dipped in burned and pulverized rock alum. To test nutmeg prick them with a pin. If they are good the oil will instantly spread around the puncture thus made. Bar soap when first brought should be cut into square pieces and put in a dry place. It tastes better after shrinking and drying. To swallow small pieces of ice, when you feel the first touch of quinsy, is said to be a sure cure for it by those who have tried it. Common hydraulic cement mixed with oil forms a good paint for roofs and out-buildings. It is waterproof and incumbrance. Soaking calico previous to the first washing is a strong solution of either salt or soda, is an excellent method of preserving the color. Sago—of which the small white variety called the pearl is the best, the large brown kind having a disagreeable earthy taste—should always be kept in a closely covered box or jar. To keep seeds from the deprecations of vermin mix some small pieces of camphor with them. Camphor placed in trunks or drawers will prevent mice from doing injury to the contents. To clean window, picture and looking glasses there is nothing so good as methylated spirits. A rag dipped in the spirit should be rubbed over the glass, which should afterwards be polished with chamois. This plan is especially good in frosty weather, when water cannot be used. The methylated spirit dries quickly and gives a bright polish to the glass. Borax water is excellent for sponging either silk or wool goods that are not soiled except to need washing. In cashmere or wool goods put a little borax in the water. This will clean them more easily and better without injury to the colors. Do not rub them on a board, but use the hands and throw on a line without wringing. Press them on the wrong side and they will look almost like new. One can cut glass with a scissors as easily as though it were an autumn leaf, says an exchange. The entire secret consists in plunging the pane of glass into a tub of water, submerging also the hands and the scissors. The scissors will cut in straight lines without a flaw. The result is a fine, brilliant and beautiful work of art. One who has tried this method of cutting glass will find it a most interesting and profitable occupation. One of the simplest and most effective cures for the often serious affliction to a traveler is a cinder in the eye. It is a common fiasco. One or two of these may be placed in the eye without injury; they shortly begin to swell and exude a glutinous substance that covers the ball of the eye, enveloping any straight lines without a flaw. The result is a fine, brilliant and beautiful work of art. One who has tried this method of cutting glass will find it a most interesting and profitable occupation.

A REMARKABLE CRIMINAL.

The Girl He Wooded and Won a Few Weeks After Killing His Wife.

The Australian newspapers which have reached this country contain whole pages of startling developments in the Deeming murder case, which is the most sensational ever known in the colonies. There are many significant facts that were not touched upon in the cables, and that throw a flood of light upon Deeming's character and show him to be an adventurer of unguessed nerve, who is at the same time as sentimental as a school girl. Fancy a red-handed murderer traveling about Australia, after he had murdered his young wife, carrying her canary in a gilt cage, and fancy this same man, not one month after the last in his series of atrocious crimes, writing ardent love letters to a young woman whom he had induced to give him a promise of marriage. Even the mails were too slow for this infatuated lover, for he sent repeated telegraphic dispatches full of love and longing. The man who had done his wife to death gave her jewelry to a young girl, and made the girl's comedy quite complete by swearing that she was the only woman.

Had Ever Loved.

Nor can one imagine a fugitive, seeking to hide a great crime, indulging in bluster, and brag on the steamer which took him to the gold diggings in West Australia. This shows that the fear of discovery could not eradicate the natural traits of the vulgar, showy adventurer who delighted to parade jewelry and tell lies of his wealth. If Deeming had thrown some quicklime over the body of the English wife whom he murdered at Windsor, Victoria, probably he would have lived to wed and murder several other women. The odor from the fireplace in the sleeping room at Windsor College, however, led the owner to make an investigation, and after about two hours' work with a pick and shovel the constables removed the heart-stone. This done, they encountered a slate slab, which was cemented in. It was in position by a compact mass of cement, and underneath the slab were the remains of the unlucky shikari, which was cemented in. It was in position by a compact mass of cement, and underneath the slab were the remains of the unlucky shikari, which was cemented in. It was in position by a compact mass of cement, and underneath the slab were the remains of the unlucky shikari, which was cemented in.

JIMMY DONOVAN'S KITE.

Little Jimmie Donovan of New Haven, came within one of solving a great question in aerial navigation a day or two ago. For three or four weeks Jimmie had been very busy with a mysterious project in the loft of his father's shop, and his folks often wondered "what that boy was up to," but to every question they put to him about his job he replied shortly, "Nawthin." All the time he had out of school he spent in the loft, and sometimes he went without his meals, so absorbed was he in his work. He became serious and rarely smiled. He was thinking. However, at noon the other day his mood changed suddenly and unaccountably, and he remarked at the dinner table that "she was about done," and he guessed "fibs didn't fly, then there wouldn't nawthin fly—much." Two hours later the significance of that observation was fully comprehended by the Donovan family circle when James came trampling down the shop loft stairs, grinning triumphantly, and pulling along the greatest, greatest, and most wonderful kite that ever was seen in New Haven country. It was the product of Jimmie's genius and unwearied industry and perseverance, a masterpiece of juvenile art and invention. The great kite was made of a strong, stiff spruce frame that was covered with light, heavy linen cloth; it was just six feet tall, so that its peak scarcely touched the top of the kitchen range, and it was about four feet from tip to tip of its wings. Its soaring capacity, therefore, with the wind to help it, it was evident, was a third more than that of the biggest American kite. For the tail of the monster young Jimmie had fastened a long line of the same material, and he had dragged the great kite down the street to a vacant city lot in the suburbs, and, having gathered all the youngsters in the neighborhood about him there, he set the kite on its end, unrolled twenty feet of cord, laying the slack of it across his arm, and addressed his audience in these appropriate words: "Here, you fellers, keep your eyes on me. We are off now for de trile trip. Are ye on de trile trip?" Saying that James let go of the kite with his left hand, flung the cord over his right shoulder, and, with a powerful, paying out wrapping cord at a great rate, while all the other boys danced on the green turf and greeted the ascension with yells and laughter. Then the mighty kite soared aloft beautifully, sliding up the incline plane of a north-westerly wind just as swiftly as a sea fowl; but, presto! when the flying machine had got its bearings and was up fifty or sixty feet, and Jimmie was yielding himself to a transport of premature triumph, a most untoward accident had happened, and dashed the hopes of the whole crowd. In the midst of this delicious excitement over the ascension, Jimmie, who had the big clumsy ball of twine in both hands, somehow got himself fixed up with the twine, and in a second the flying strand took half a dozen hitches and loops about his body. Just at that instant, too, of course, a sudden mighty gust of wind smote the kite and it was blown away from its moorings, and Jimmie, kicking and squirming, and howling with fright and amazement, soared away after the kite. At that spectacle the terrified juveniles yelled in concert with the unwilling aeronaut, and one youngster, somewhat less excited than his companions, shouted after the vanishing kite: "Hey Jimmie! Let go de rope and take a tumble!" But Jimmie couldn't let go at his will, and it was not until he had risen about twenty-five or thirty feet that the cord, after twirling him around several times, straightened out, and he was able to get himself free from the twine and to descend. Luckily it let go of Jimmie when he was above a soft, mushy place in the lot. He fell on his right side and lay motionless in the mud. The other boys were so much excited that they ran about the flying strand took half a dozen hitches and loops about his body. Just at that instant, too, of course, a sudden mighty gust of wind smote the kite and it was blown away from its moorings, and Jimmie, kicking and squirming, and howling with fright and amazement, soared away after the kite. At that spectacle the terrified juveniles yelled in concert with the unwilling aeronaut, and one youngster, somewhat less excited than his companions, shouted after the vanishing kite: "Hey Jimmie! Let go de rope and take a tumble!"

SEVEN YEARS' SUFFERING.

GENTLEMEN—I had suffered very much from inflammatory rheumatism, which through wrong treatment led to very serious sores on my hands and feet. With these I suffered for seven years, during which time I had neither sleep nor stocking on. I commenced using B. B. B. externally and internally, using the pills also, and I can say now that the sores are entirely cured, and have been free some time. I believe the bitterns were the means of saving my life.

Mrs. ANNE BARR,
Crescent's Corners, Acton P. O. Ont.

He—Did you have a good time on your camping party last summer? She—Yes, we had seven men and seven girls, and when we came home there were forty-nine engagements in the party.

NO MORE BOTHER.

GENTLEMEN—I have used Hagyard's Yellow Oil for my chilblains and it cured them. I have never been bothered with them since.

ROSE KNOWN, Victoria, B. C.

Is your father a very observing man? Well, I'm not sure; but yesterday, when he suddenly sat down on the sidewalk, he looked four ways at once.

A SURE SIGN OF DEATH.

From time to time we are horrified by learning that some person has been buried alive, after assurances have been given of death. Under these circumstances the opinion of a rising French physician upon the subject becomes of world-wide interest; for since the tests which have been in use for years have been found unreliable, no means should be left untried to prevent before a doubt that life is actually extant beyond a conveyance our loved ones to the grave. Dr. Martini asserts that an infalling test may be made by producing a blister on the hand or foot of the body by holding the flame of a candle to the same for a few seconds, or until the blister is formed, which will always occur. If the blister contains any fluid it is evidence of life, and the blister only that produced by an ordinary burn; if, on the contrary, the blister contains only steam, it may be asserted that life is extinct. The explanation is as follows: A corpse is nothing more than inert matter, under the immediate control of physical laws, which causes all liquid broken to a certain temperature to become steam; if the epidermis is raised, the blister produced, it breaks with a little noise, and the steam escapes. But if, in spite of appearances there is any remnant of life, the organic mechanism continues to be governed by physiological laws, and the blister will contain serum matter, as in the case of any ordinary burn. The test is as simple as the proof conclusive. Dry blister, death; liquid blister, life. Any man may try it; there is no error possible.
