

THE FORE-ARM LEVER WALKING STICK CRUTCH (PATENT)

CONSISTS of an almost horizontal handle, which is grasped in the palm of the hand, and of a slightly sloped spring which supports the forearm from the wrist to the elbow, where the arm hangs naturally. The greater part of the weight of the body bears on the hand and the wrist. Its use compels the active use of hands, arm and shoulder, and is thus an exercise for the upper limb. It brings back the joy of walking to the patient, who can easily and naturally use this crutch after a little practice, and half-a-dozen miles or more may be covered without fatigue. Stairs, 'buses and trams form no obstacles for the patient equipped with this invention.

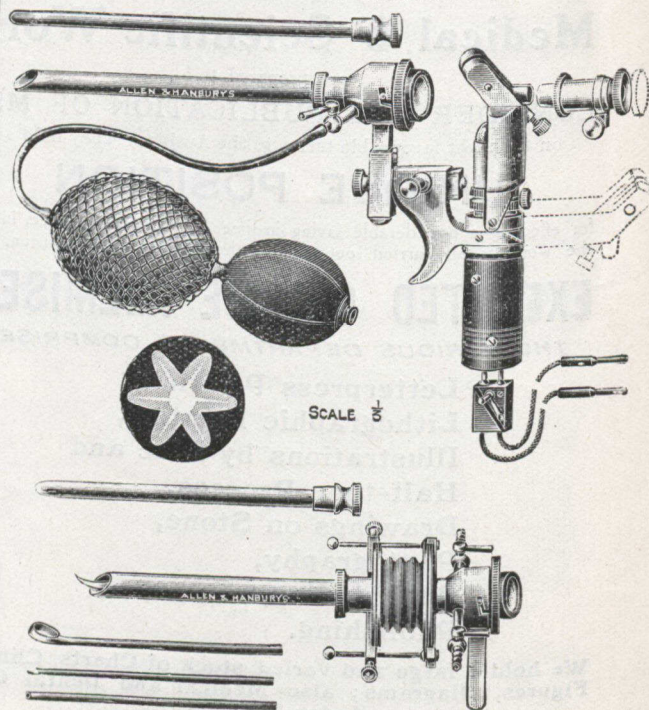

DESCRIPTIVE LEAFLET SENT FREE.

Two Qualities,
18/6 and 28/6 per pair.
